APPENDICES

Appendix A - Production and Use Water Year 2012-13

Appendix B - Production and Use Water Years 1965-66 through 2012-13

Appendix C - Substantial Water Users 2012-13

Appendix D - Water Quality Data

SECTION 1 – SUMMARY

Section 1 - A summary of the Santa Margarita River Watershed Annual Watermaster Report for the 2012-13 Water Year.

Section 2 - This Annual Watermaster Report is prepared pursuant to the U. S. District Court Order dated March 13, 1989. The Court has retained jurisdiction over all surface flows of the Santa Margarita River Watershed and all underground waters determined by the Court to be subsurface flow of streams or creeks or which are determined by the Court to add to, support, or contribute to the Santa Margarita River stream system. The Watershed is adjudicated, as to all underground waters, basins, surface flow, streams and subsurface flows that add to, support, or contribute to the Santa Margarita River stream system. Local vagrant groundwaters that do not support the Santa Margarita River stream system are outside Court jurisdiction.

Section 3 - Surface water flows varied in Water Year 2012-13. Flows for long-term stations on Murrieta Creek at Temecula, Santa Margarita River near Temecula, and Santa Margarita River at Ysidora were 12%, 27% and 7% of their long-term averages, respectively. Flows at Temecula Creek near Aguanga were 16% of the long-term average. Direct surface diversions to use totaled 722 acre feet, which reflects an increase of one acre foot from the prior year. The total quantity of water in storage in the Watershed on September 30, 2013, was 667,705 acre feet, of which 21,224 acre feet were Santa Margarita River water and 646,481 acre feet were imported water.

Section 4 - Groundwater extractions were 42,621 acre feet during Water Year 2012-13 as shown on Table 4.1, compared to 39,163 acre feet in 2011-12. Water purveyors pumped 35,998 acre feet, and 6,623 acre feet were pumped by other substantial users. Total local production, including groundwater extractions and surface diversions in 2012-13 was 43,343 acre feet. This compares with 39,884 acre feet in 2011-12, and represents an increase of nine percent. Total annual local production for use for the period 2004 through 2013 is shown on Figure 1.1.

Section 5 - During Water Year 2012-13, 74,889 acre feet of net imports were distributed for use within the Watershed, as shown on Table 5.2. This compares with 75,440 acre feet in 2011-12, and represents a decrease of one percent. Annual imports for the period 2004 through 2013 are shown on Figure 1.2 and Table 5.4. Exports of wastewater and native water for use outside the Watershed in 2012-13 were 18,325 acre feet. This compares with 18,898 acre feet in 2011-12, and represents a decrease of three percent.

Section 6 - Water rights consist primarily of riparian and overlying rights. Other rights include appropriative rights and federal reserved rights. Water purveyors in the Santa Margarita River Watershed also exercise groundwater appropriative rights. Except for surface water appropriative rights, water rights generally have not been quantified in the Watershed. Appropriative surface water rights on file with the State Water Resources Control Board amount to 990,719 gallons per day. This corresponds

to 1.53 cubic feet per second (cfs) or 3.04 acre feet per day of direct diversion rights and 54,313.5 acre feet of active storage rights.

Figure 1.1

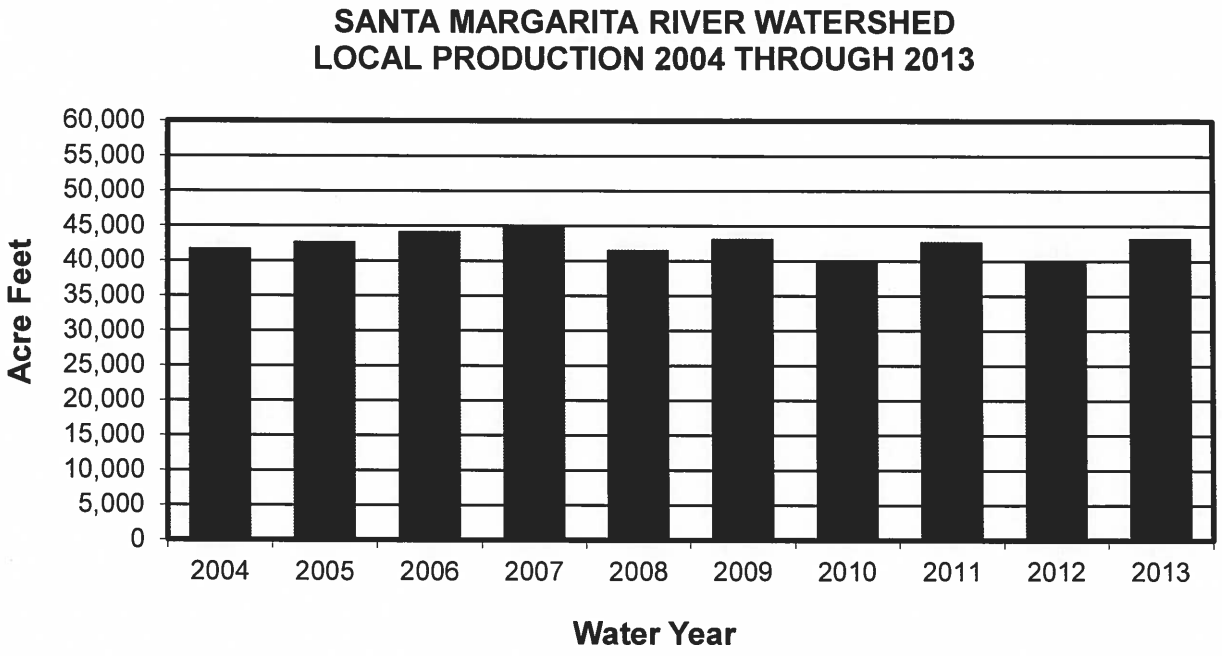

Figure 1.2

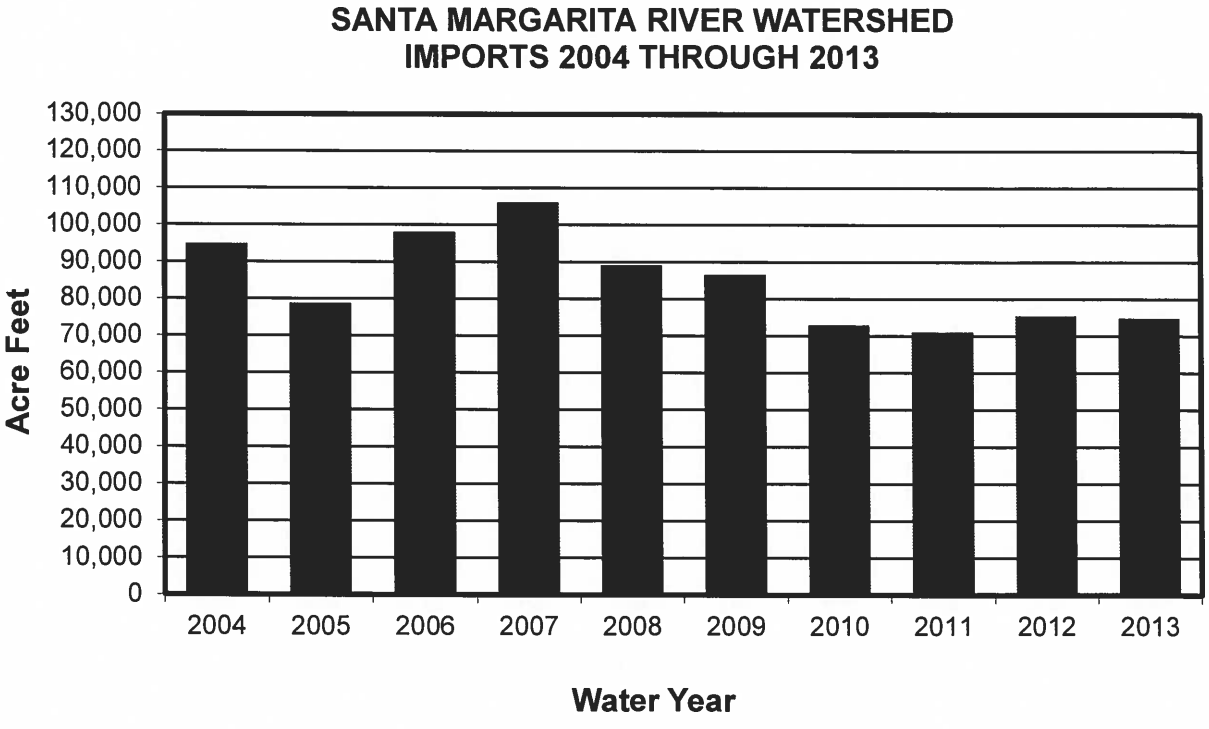
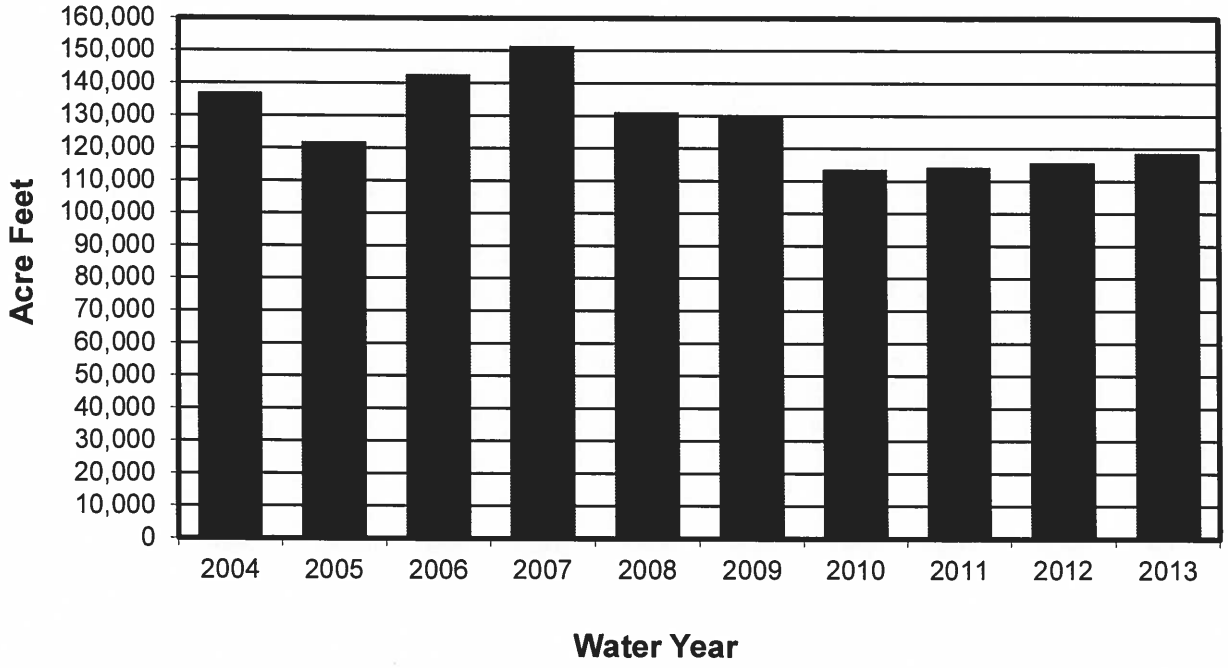


Section 7 – Total imported supplies plus local production during 2012-13 totaled 118,232 acre feet compared to 115,324 acre feet reported in 2011-12. Of that quantity, 46,345 acre feet were used for agriculture; 10,685 acre feet were used for commercial purposes; 51,499 acre feet were used for domestic purposes; 37 acre feet were discharged to Murrieta Creek; 15 acre feet were discharged to Santa Gertrudis Creek; 2,433 acre feet were discharged by Rancho California WD from Metropolitan Water District of Southern California (MWD) Outlet WR-34 during 2012-13, pursuant to the Cooperative Water Resource Management Agreement (CWRMA); 2,644 acre feet were exported by Camp Pendleton; and 325 acre feet were recharged by Rancho California WD to storage. It is noted, the agriculture use includes 393 acre feet of reclaimed water and thus the agriculture use of production is 45,952 acre feet. The overall system loss was 4,574 acre feet. System gain or loss is the result of many factors including errors in measurement, differences between periods of use and periods of production, leakage and unmeasured uses. These data are shown on Table 7.1.

Total annual production for the period 2004 through 2013 is shown on Figure 1.3.

Figure 1.3

SANTA MARGARITA RIVER WATERSHED
TOTAL PRODUCTION 2004 THROUGH 2013



Section 8 - Use of water from small storage ponds may be unauthorized. Camp Pendleton has taken the position that exportation of treated wastewater, the source of which is the native waters of the Santa Margarita River system, without legal authority for such exportation, is an unauthorized use of water.

Section 9 - Threats to water supply include high nitrate levels in Rainbow Creek and Anza Valley in past years, potential overdraft conditions in the Murrieta-Temecula and Anza groundwater basins, and salt balance issues in the upper Watershed. Additional threats have been recently identified, including high concentrations of nitrates, arsenic, fluoride and manganese in the Murrieta-Temecula area, as well as the discovery of the Quagga mussel in imported supplies.

Section 10 - The U. S. Geological Survey (USGS) monitored surface water quality at the Temecula gaging station on the Santa Margarita River.

Groundwater samples from wells were analyzed for water quality by Camp Pendleton, Western MWD - Murrieta Division, Rancho California WD, and the Pechanga Band during 2012-13. The two primary constituents of interest are nitrates and total dissolved solids (TDS). The Basin Plan Objective for TDS of 750 mg/l was exceeded in nine of eleven wells at Camp Pendleton. Two wells sampled by Rancho California WD showed concentrations exceeding 750 mg/l, the Basin Plan Objective.

Section 11 - The Cooperative Water Resource Management Agreement between Camp Pendleton and Rancho California Water District was approved by the District Court on August 20, 2002. During the 2013 calendar year, Rancho California WD discharged 2,562 acre feet into the Santa Margarita River to meet flow requirements under the Agreement.

Section 12 - Projected Watermaster expenditures for the next five years are listed.

Section 13 – The actual Watermaster costs for Water Year 2012-13 were $612,525 compared to the Court approved budget of $649,600, resulting in a favorable variance of $37,075. A total Watermaster budget for Water Year 2014-15 is proposed to be $679,700. This budget includes $446,750 for the Watermaster Office and $232,950 for operation of gaging stations and groundwater monitoring by USGS.

SECTION 2 - INTRODUCTION

2.1 Background

On January 25, 1951, the United States of America filed Complaint No. 1247 in the United States District Court for the Southern District of California to seek an adjudication of all respective water rights within the Santa Margarita River Watershed. The Final Judgment and Decree was entered on May 8, 1963, and appealed to the U.S. Court of Appeals. A Modified Final Judgment and Decree was entered on April 6, 1966. Among other things, the Decree provides that the Court:

> . . . retains continuing jurisdiction of this cause as to the use of all surface waters within the watershed of the Santa Margarita River and all underground or sub-surface waters within the watershed of the Santa Margarita River, which are determined in any of the constituent parts of this Modified Final Judgment to be a part of the sub-surface flow of any specific river or creek, or which are determined in any of the constituent parts of this Modified Final Judgment to add to, contribute to, or support the Santa Margarita River stream system.

In March 1989, the Court issued an Order appointing the Watermaster to administer and enforce the provisions of the Modified Final Judgment and Decree and subsequent orders of the Court. The appointing Order described the Watermaster's powers and duties as well as procedures for funding and operating the Watermaster's office. Also in 1989, the Court appointed a Steering Committee that at the conclusion of 2012-13 was comprised of representatives from the United States, Eastern Municipal Water District, Fallbrook Public Utility District, Metropolitan Water District of Southern California, Pechanga Band of Luiseño Mission Indians, Western Municipal Water District, and Rancho California Water District. The purposes of the Steering Committee are to assist the Court, to facilitate litigation, and to assist the Watermaster.

2.2 Authority

Section II of the appointing Order requires that the Watermaster submit a written report containing findings and conclusions to the Court promptly after the end of each water year.

2.3 Scope

The subjects addressed in this report are responsive to Section II of the appointing Order. Information and data contained in this report are based on information reported to the Watermaster by the various water users within the Watershed and others. Therefore, the Watermaster does not guarantee the completeness and accuracy of the information presented in this report, although most of the data presented are based on measurements. Estimates by the Watermaster are so noted.

Page Intentionally Blank

SECTION 3 - SURFACE WATER AVAILABILITY AND USE

3.1 Surface Flow

Over the years, flows in the Santa Margarita River Watershed have been measured at the stations listed on Table 3.1. A number of these stations have been discontinued. During Water Year 2012-13, the USGS operated 13 stations under an agreement with the Watermaster. These include three stations where Riverside County Flood Control and Water Conservation District shares the local costs with the Watermaster. In addition to stream flows, the USGS also measures water surface elevation and precipitation at Vail Lake.

The USGS also operates several stations in the Watershed under contract with Camp Pendleton. These include stream gaging stations on Fallbrook Creek and on the outlet channel and spillway for Lake O'Neill. The USGS also operates a tidal water level recorder at the mouth of the Santa Margarita River.

Monthly flows for stations in Water Year 2012-13 are shown on Table 3.2. Those flows consist of final USGS discharge determinations approved for publication by the USGS. Official USGS discharges for Water Year 2012-13 are published by the USGS at the following website: *http://waterdata.usgs.gov/ca/nwis/sw.*

In considering the historical record of flow at these stations, it should be recognized that the long-term averages include variations in Watershed conditions such as level of development, groundwater production, return flows, impoundments and vegetative use as well as hydrologic conditions, changes in gaging station locations and other factors. Descriptions of the various historical locations of gaging stations may be found in the publication, Water Resources Data - California, which was published annually by the USGS in hard copy form through Water Year 2003-04. For subsequent years, the gaging station descriptions can be found at the website provided above.

TABLE 3.1

SANTA MARGARITA RIVER WATERSHED
STREAM GAGING STATIONS THROUGH WATER YEAR 2012-13

Station Name	Station No.	Area Sq. Miles	Entity	Period Of Record
Temecula Creek Near Aguanga	11042400	131	USGS	August 1957 to Present
Wilson Creek Above Vail Lake Near Radac	11042490	122	USGS	October 1989 to September 1994
Temecula Creek At Vail Dam	11042520	320	USGS	February 1923 to October 1977
Vail Lake Near Temecula (Reservoir Storage)	11042510	320	USGS	October 1948 to Present

Murrieta Creek At Temecula	11043000	222	USGS	October 1924 to Present
Santa Margarita River Near Temecula	11044000	588	USGS	February 1923 to Present
Rainbow Creek Near Fallbrook	11044250	10.3	USGS	November 1989 to Present
Santa Margarita River At FPUD Sump 1/	11044300	620	USGS	October 1989 to Present
Sandia Creek Near Fallbrook	11044350	21.1	USGS	October 1989 to Present
Santa Margarita River Tributary Near Fallbrook	11044600	0.52	USGS	October 1961 to September 1965
DeLuz Creek Near DeLuz	11044800	33.0	USGS	October 1992 to Present
DeLuz Creek Near Fallbrook 2/	11044900	47.5	USGS/ USMC	October 1951 to September 1967 October 1989 to September 1990 April 2002 to February 2003
Santa Margarita River Near DeLuz Station	11045000	705	USGS	October 1924 to September 1926
Fallbrook Creek Near Fallbrook 3/	11045300	6.97	USGS/ USMC	October 1993 to Present
Santa Margarita River At Ysidora 4/	11046000	723	USGS	February 1923 to Present

1/ Record includes measurements for Santa Margarita near Fallbrook (#11044500) for October 1924 to September 1980.
2/ Recorded by USMC, Camp Pendleton October 1967 to 1977.
3/ Recorded by USMC, Camp Pendleton for October 1964 to September 1977 and October 1989 to September 1993.
4/ Station temporarily operated as SMR at USMC Diversion Dam near Ysidora (#11045050) from February 26, 1999 to September 27, 2001.

1/ In summer 2006, gaging location was moved upstream 0.4 miles from prior location to current location 100 feet upstream of Metropolitan Water District pipe crossing, 0.4 miles upstream of the Rainbow Canyon Road/Old Highway 395 Bridge.
2/ Previously published as Murrieta Creek at Tenaja Road.
3/ Continuous record stopped on February 22, 2005, in lieu of bridge installation. Only discharge measurements were taken from February 2005 until September 2007.
4/ Includes record of two years at Santa Margarita River at USMC Diversion Dam near Ysidora station.
5/ Includes wastewater flows.

Total flows at four long-term stations, for Water Years 2011-12 and 2012-13, are compared with their averages in the tabulation below. Average flows for the Santa Margarita River stations near Temecula and near Ysidora are shown for two periods: before and after Vail Dam was constructed (1923 to 1948, and 1949 to 2012).

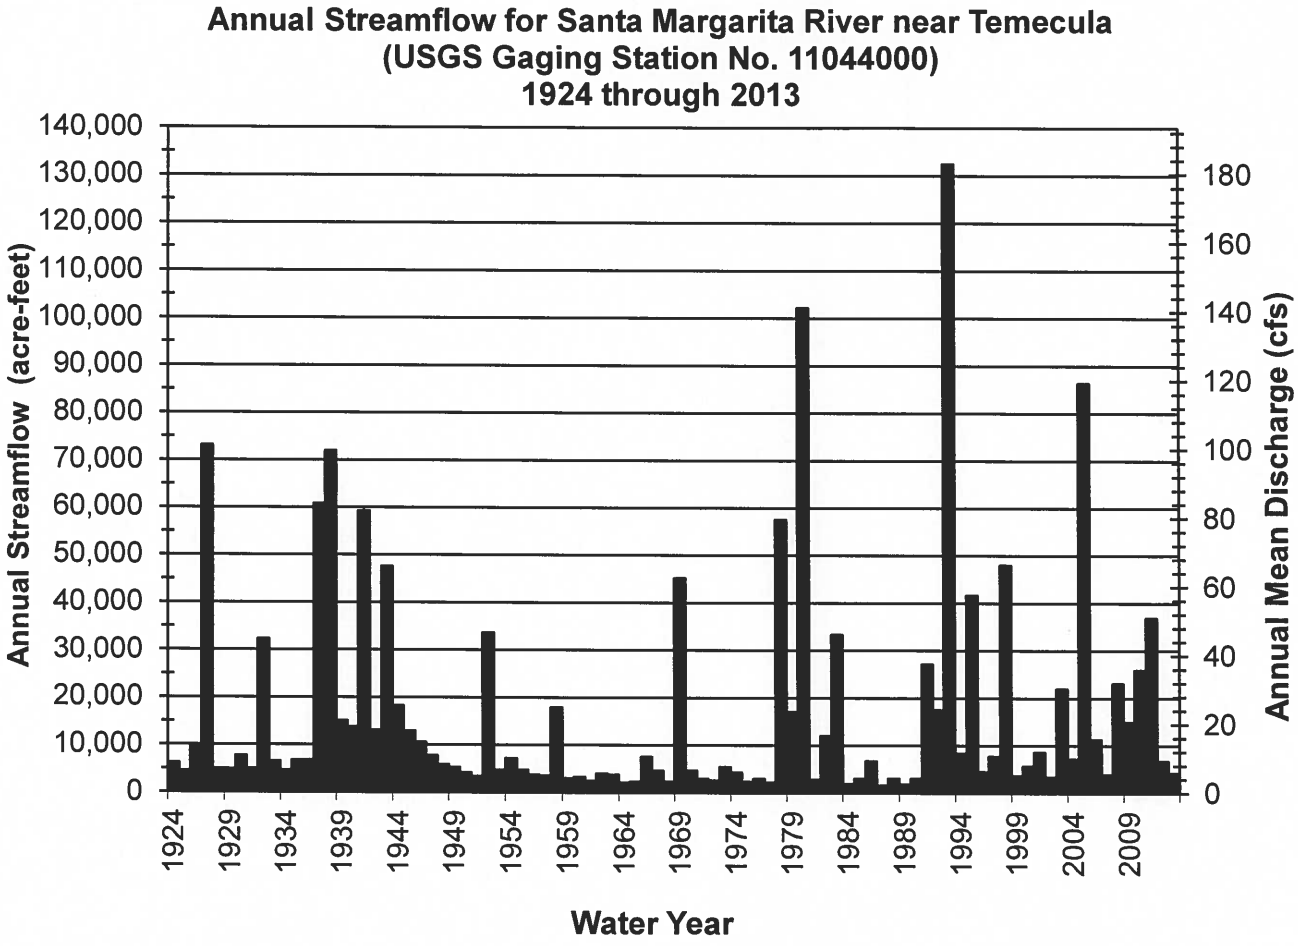
	TOTAL FLOW		AVERAGE FLOW	
	2011-12 Acre Feet	2012-13 Acre Feet	Through 2012 Acre Feet	
Temecula Creek Near Aguanga	1,773	861	5,520	(1957-2012)
Murrieta Creek At Temecula	2,467	1,287	10,294	(1925-2012)
Santa Margarita River Near Temecula	6,737	4,220	15,464 20,390	(1949-2012) (1923-1948)
Santa Margarita River At Ysidora*	8,213	2,266	32,485 31,390	(1949-2012) (1923-1948)

* At various locations

The foregoing tabulation indicates the flows for Water Year 2012-13 were below normal for all four stations. Flows for long-term stations on Temecula Creek near Aguanga, Murrieta Creek at Temecula, Santa Margarita River near Temecula and Santa Margarita River at Ysidora were 16%, 12%, 27% and 7% of their long-term averages, respectively.

The Santa Margarita River near Temecula station is of particular interest relative to discharge requirements specified in the CWRMA between Camp Pendleton and Rancho California WD, as described in Section 11. The long-term time series for annual streamflow for Santa Margarita River near Temecula is provided on Figure 3.1, showing the 2012-13 flows were in the second quartile and 63% of the flows for the prior year.

Figure 3.1

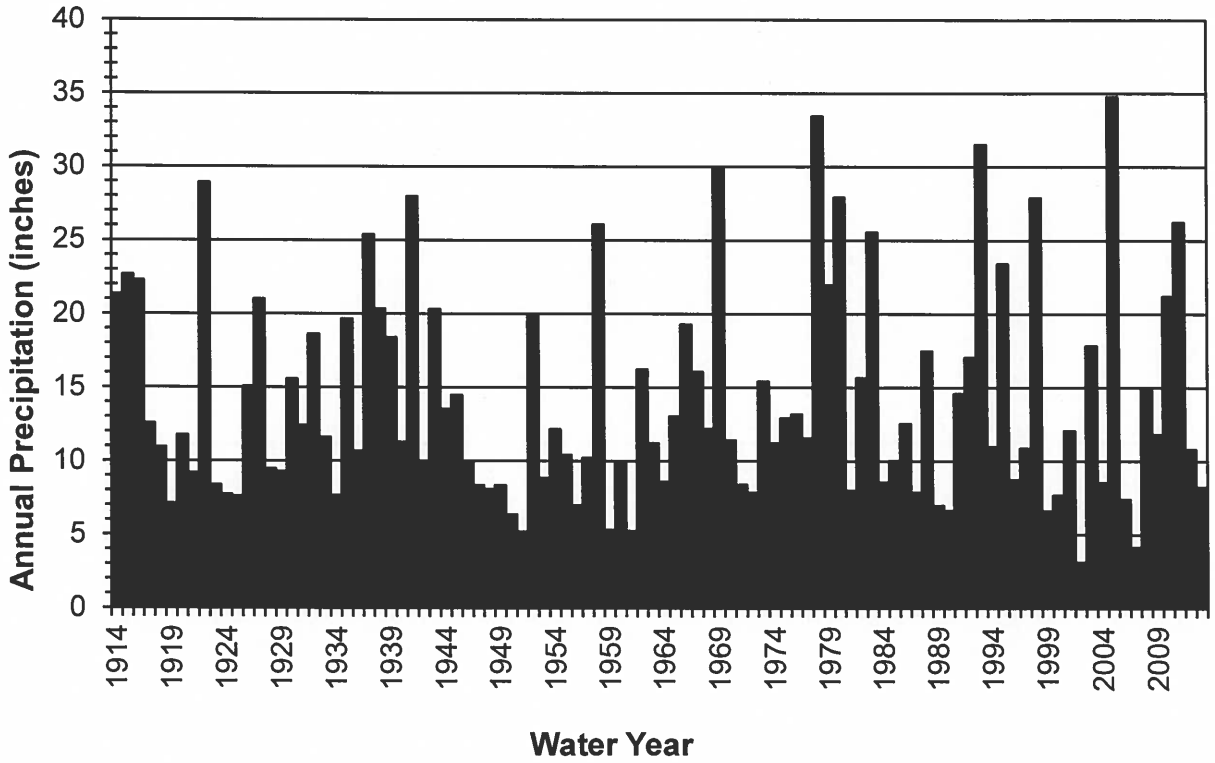


It is also interesting to review long-term precipitation records relative to long-term streamflow. Figure 3.2 shows the long-term time series for annual precipitation for the Wildomar gage maintained by the Riverside County Flood Control and Water Conservation District. The Wildomar gage is specified in the CWRMA for determining hydrologic year types in establishing Rancho California WD discharge requirements to meet flows for the Santa Margarita River near Temecula. The long-term average precipitation for the Wildomar gage for the period 1914 through 2013 is 14.05 inches. The reported precipitation for Water Year 2012-13 is 8.23 inches, which is in the first quartile for the period of record.

Monthly flows shown on Table 3.2 consist primarily of naturally occurring surface runoff, including return flows, except for Rancho California WD discharges into the Santa Margarita River and Murrieta Creek. Most of the Rancho California WD discharges are pursuant to the CWRMA. During Water Year 2012-13, the total discharges from MWD Meter WR-34 into the Santa Margarita River equaled 2,433 acre feet. The outlet from WR-34 is located just upstream from the Santa Margarita River near Temecula gaging station. In 2009, Rancho California WD extended a pipeline from its distribution system to discharge at the same location as the outlet WR-34. Discharges from the potable connection to the Santa Margarita River totaled 45 acre feet. During Water Year 2012-13, there were no discharges to Murrieta Creek from the System River Meter.

Figure 3.2

Annual Precipitation for Wildomar Gage
1914 through 2013



During 2012-13, Rancho California WD also released 37 acre feet from wells into Murrieta Creek, and 15 acre feet from wells into Santa Gertrudis Creek.

3.2 Surface Water Diversions

Surface diversions to surface water storage and groundwater storage are shown on Table 3.3 for Vail Lake and Table 3.4 for Lake O'Neill. In general, diversions to surface storage at Vail Lake and Lake O'Neill are computed as being equal to inflow less spill, however, diversion to surface storage at Vail Lake excludes inflow during the period from May 1 through October 31 when Permit 7032 does not allow such diversions. Inflow to Vail Lake is calculated as the sum of evaporation, spill, releases and change of storage. Inflow into Vail Lake during the period when diversions are not permitted is released and not credited to groundwater storage.

Direct surface diversions for Water Year 2012-13 are shown on Table 3.5. The use is primarily irrigation. Estimated consumptive uses, losses and returns are also shown.

3.3 Water Storage

Major water storage facilities in the Santa Margarita River Watershed are listed on Table 3.6, together with the water in storage on September 30, 2012 and September 30, 2013. Total Santa Margarita River stream system water in storage at the end of Water Year 2012-13 totaled 21,224 acre feet, compared to 27,206 acre feet at the end of the previous year. Imported water in storage in Lake Skinner and Diamond Valley Lake, both operated by MWD, is also shown on Table 3.6.

TABLE 3.3

SANTA MARGARITA RIVER WATERSHED
SURFACE WATER DIVERSIONS TO STORAGE FOR VAIL LAKE
2012-13
Quantities in Acre Feet

	Surface Water Storage		
	2010-11	**2011-12**	**2012-13**
Storage End of Prior Year	23,850	29,390	26,560
Inflow - Total	13,944	2,964	1,947
Inflow to be Bypassed [1/]	1,262	906	645
Spill	0	0	0
Diversions to Surface Storage [2/]	12,682	2,058	1,302
Annual Evaporation	4,672	4,893	4,468
Releases - Total	3,732	901	3,259
Release to GW Storage [3/ 4/]	2,470	(5)	2,614
Change of Storage	5,540	(2,830)	(5,780)
Storage End of Year	29,390	26,560	20,780
	Groundwater Storage		
Recharge Release from Vail Lake	2,470	0	2,614
Recovered Vail Lake Recharge Water from GW Storage [5/]	2,470	5	2,614

Data reported by Rancho California WD except end of year storage reported by USGS.

1/ Inflow to be bypassed Oct 1 to Oct 31 and May 1 to Sept 30.

2/ Inflow less Spill less Inflow to be Bypassed.

3/ Total Release less Inflow to be Bypassed.

4/ Vail Lake operations shown in Table 3.3 reflect water year operations to be consistent with reporting in the Annual Watermater Report. However, Permit 7032 specifies calendar year reporting and a continuous operating season of May through October for bypasses overlapping two water years. The value of 2,614 acre feet for Release to GW Storage is correct but misleading because the bypass season continues into October 2013. Inspection of Rancho California WD records for May through October 2013 shows total Inflow to be Bypassed in the amount of 615 acre feet with total Releases of 687 acre feet, resulting in 72 acre feet of excess releases during the Permit bypass season of May through October 2013.

5/ See Table 7.4.

TABLE 3.4

SANTA MARGARITA RIVER WATERSHED

SURFACE WATER DIVERSIONS TO STORAGE FOR LAKE O'NEILL

2012-13

Quantities in Acre Feet

Storage End of Year	642	646	444
	Groundwater Storage		
Recharge Release from Lake O'Neill	2,106 6/	1,872 6/	1,655 6/
Deliveries to Recharge Ponds	3,921	559	420
Indirect Recharge from Ditch System	839	881	1,170
TOTAL	6,866	3,312	3,245

1/ 1,185 AF diverted from the Santa Margarita River, 1,504 AF estimated inflow from Fallbrook Creek, 545 AF from local runoff, and 222 AF from rainfall on lake surface.

2/ 1,657 AF diverted from the Santa Margarita River, 341 AF estimated inflow from Fallbrook Creek, 141 AF from local runoff, and 109 AF from rainfall on lake surface.

3/ 1,505 AF diverted from the Santa Margarita River, 159 AF estimated inflow from Fallbrook Creek, 77 AF from local runoff, and 91 AF from rainfall on lake surface.

4/ Inflow less Spill.

5/ Includes seepage losses, leakage through flashboards and gates, and unaccounted for

6/ Includes Release to GW Storage and Apparent Seepage to GW from Lake O'Neill.

7/ Dredging operations for Lake O'Neill occurred during Water Year 2012. The preparation for and the actual dredging operation affected various operations for Lake O'Neill during Water Years 2011, 2012, and 2013 to varying levels within each particular year, including timing and amount of diversions from Santa Margarita River for both deliveries to Lake O'Neill and the recharge ponds, and Recharge Release from Lake O'Neill.

SECTION 4 - SUBSURFACE WATER AVAILABILITY

4.1 General

Much of the water from the Santa Margarita River stream system is obtained by pumping subsurface water. The Court has identified two basic types of subsurface water in the interlocutory judgments incorporated into the 1966 Modified Final Judgment and Decree. One type is vagrant, local, percolating waters that do not add to, support or contribute to the Santa Margarita River or its tributaries. Such waters have been determined to be outside the continuing jurisdiction of the Court. These waters are typically found in the basement complex and/or residuum deposits in the Watershed.

Other subsurface waters were found by the Court to add to, support and contribute to the Santa Margarita River and/or its tributaries. Aquifers containing such waters have been designated by the Court as younger alluvium and older alluvium. Younger alluvial deposits are commonly exposed along streams and in valleys. Older alluvium may be found underneath younger alluvium and is not limited to areas along stream channels. Older alluvium may or may not be exposed at ground surface. The use of subsurface water found in younger and older alluvium is generally under the continuing jurisdiction of the Court and is reported upon in this report.

4.2 Extractions

Total production of Santa Margarita River water by substantial water users in the Watershed from all sources is listed on Table 4.1 by hydrologic area, along with estimated consumptive use and return flows. Recovery of imported water that has been directly recharged is not included on Table 4.1. Substantial water users include water purveyors as well as private irrigators who irrigate eight acres or more or use an equivalent quantity of water.

In 2012-13, production by water purveyors totaled 35,998 acre feet, compared to 31,936 acre feet in 2011-12. Monthly quantities are shown in Appendix A and annual production for water years between 1966 and 2013 is shown in Appendix B.

The quantities of subsurface extractions by private irrigators are based on the irrigated acreage and the crop type. These quantities are reported in Appendix C to total 6,623 acre feet in 2012-13. Of the subsurface extractions, 75 percent is estimated to have been consumptively used and 25 percent to have been return flow. Return flow is that portion of the total deliveries that is not consumed. Although return flows average about 25 percent, such flows are affected with the type of use (domestic, commercial and irrigation), the type of irrigation application (drip, micro-sprinkler, furrow), and exports from watersheds.

1/ Estimated consumptive use is equal to 75% of Total Groundwater Production plus 75% of Surface Diversions less 10% (CU = .75{GW + .90 * SW}), except for Camp Pendleton where export of 2,644 acre feet is excluded and return flows include any measured wastewater returns to the Watershed.

2/ Includes lands overlying deep aquifer in Anza Valley.

3/ Includes surface water diversion for irrigation, commercial and domestic use.

* Data taken from Appendix C.

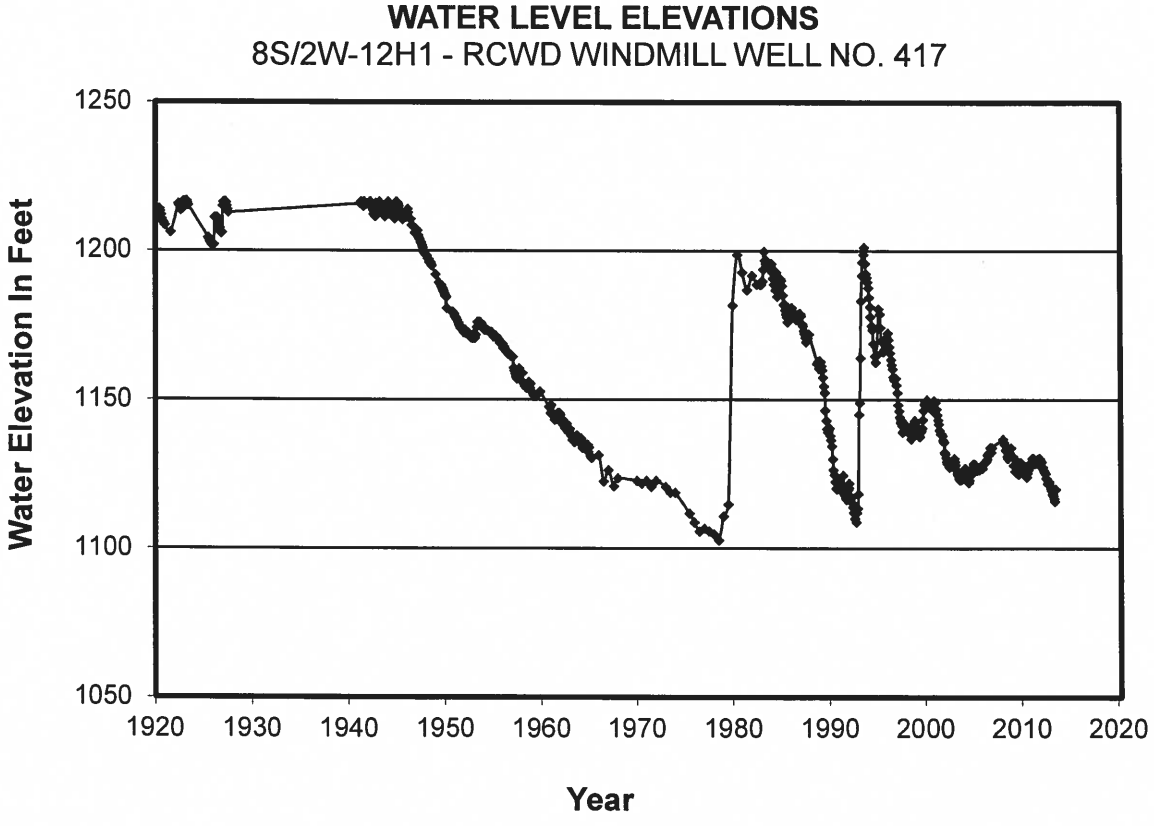
** RCWD pumped an additional 289 AF that was exported to the San Mateo Watershed.

4.3 Water Levels

Water levels in selected wells in the Watershed are measured periodically by various entities. Historical water levels in five wells at various locations in the Watershed are shown in this report on Figures 4.1, 4.2, 4.3, 4.4 and 4.5.

Figure 4.1 shows water levels in Well No. 8S/2W-12H1 (Windmill Well) located in the Rancho California WD service area downstream from Vail Lake. Note the extended drawdown from 1945 to 1978, the major recoveries during the wet years in 1980 and 1993, and the effect of relatively dry years after 1980 and after 1993. Water levels declined by 3.7 feet between September 30, 2012 and September 30, 2013. It should be noted that the Windmill Well is located in Pauba Valley about 1.5 miles downslope from the Valle de los Caballos (VDC) recharge area, where releases from Vail Lake as well as imported water are recharged. In Water Year 2012-13, 11,395 acre feet of imported water were recharged in the VDC of which 97 percent was recovered in the same year.

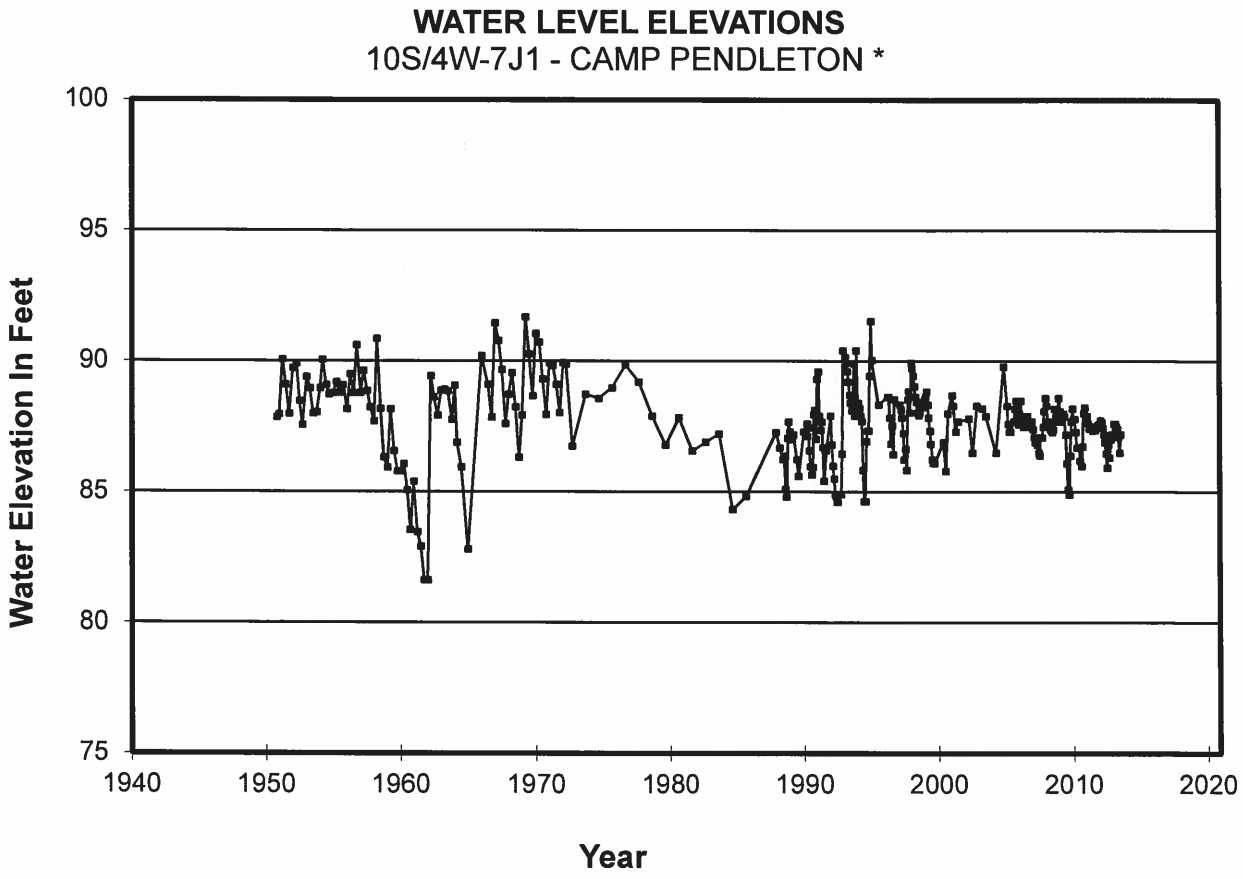
Figure 4.1



Collar El. 1216.7 Feet; Depth 515 Feet; Drilled in Alluvium
Ref: RCWD reports (1920-2013)

Figure 4.2 shows water levels at Camp Pendleton in Well No. 10S/4W-7J1, a monitoring well located in the Upper Sub-basin. Fluctuations in recent years illustrate recharge during the winter months and drawdown each summer, with the water levels ranging from approximately 82 to 92 feet in elevation. Water levels in Well 7J1 rose 1.3 feet in the period between September 2012 and September 2013.

Figure 4.2

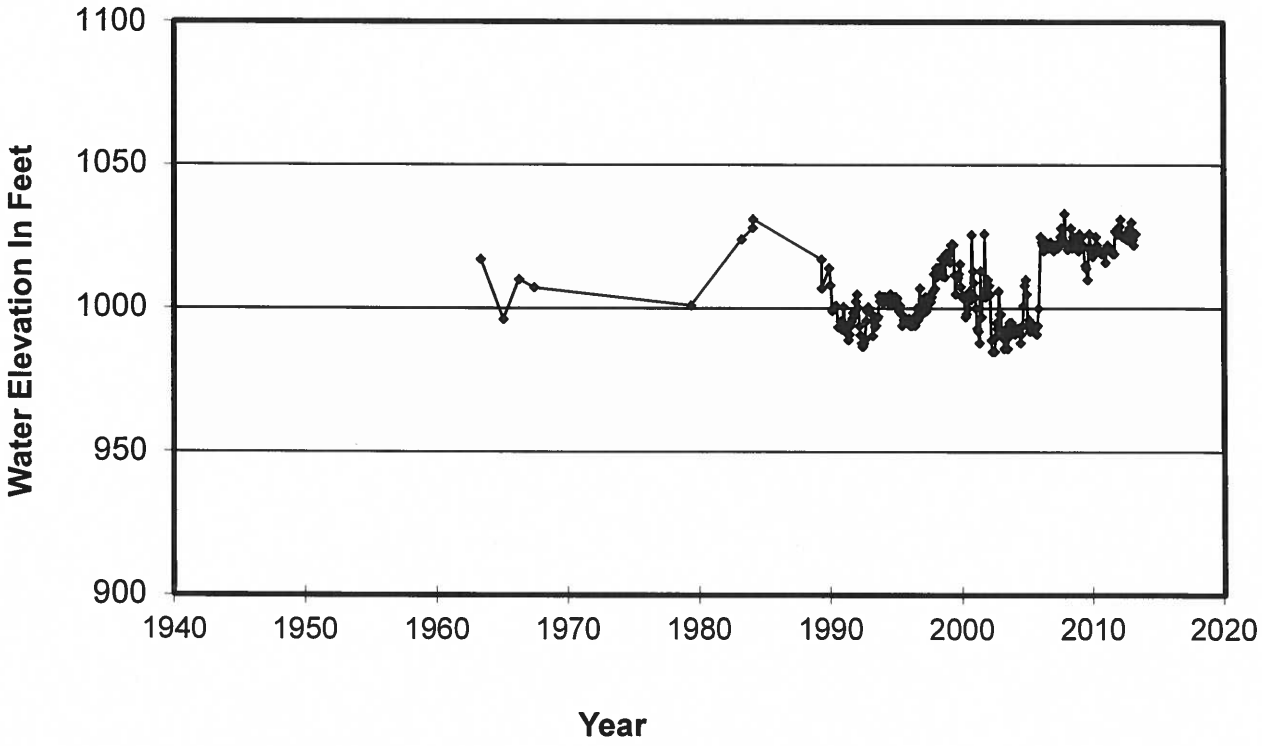


Ground El. 93.8 Feet; Depth 141 Feet; Perf. Unknown; Drilled in Alluvium
Camp Pendleton Records (1950-72) (1988-2013); Leeds Hill Study (1973-85) Dates Estimated
* Data shown for Well No. 10S/4W-7J1 except for period October 1999 through September 2007 data shown for Well No. 10S/4W-7J4.

Figure 4.3 shows water levels from Holiday Well No. 7S/3W-20C9 in the Murrieta Division service area of Western MWD. The Holiday Well was used as a production well until February 2006, but now is used only as a monitoring well. Water levels in this well rose by one foot between September 30, 2012 and September 30, 2013. Water levels in the Lynch Well, 7S/3W-17R2, which serves as a monitoring well, were not available in 2012-13, due to incorrect well readings.

Figure 4.3

WATER LEVEL ELEVATIONS
7S/3W-20C9 - WMWD HOLIDAY WELL

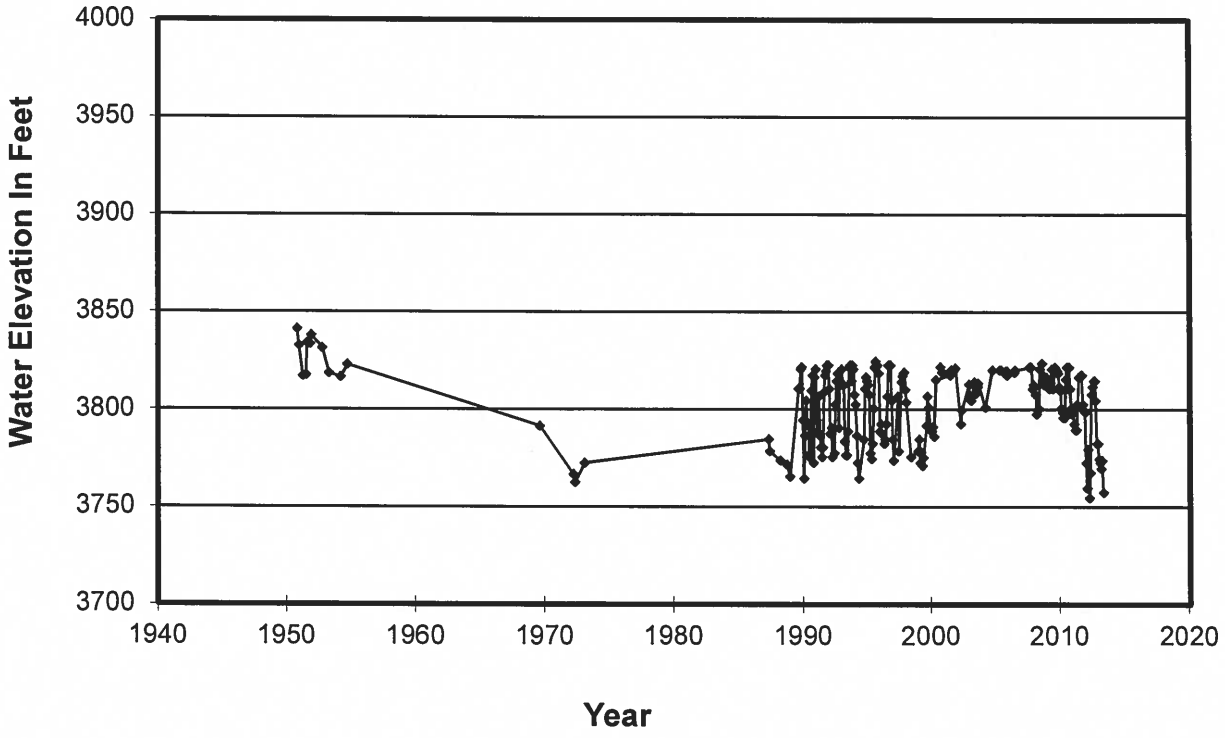


Ground El. 1090 Feet; Depth 307 Feet; Perf. 60 - 307 Feet
Western Municipal Water District

Figure 4.4 shows water levels for Well No. 7S/3E-21G1, Anza Mutual Water Company Well No. 1, a production well located in the Anza Valley. Water levels in this well declined by 10 feet between September 30, 2012 and September 30, 2013. As may be noted from Figure 4.4, recent measurements show annual 50 foot fluctuations in groundwater levels at this well, partly in response to the operation of nearby irrigation wells. Current levels are at or near the lowest elevation for the period of record.

Figure 4.4

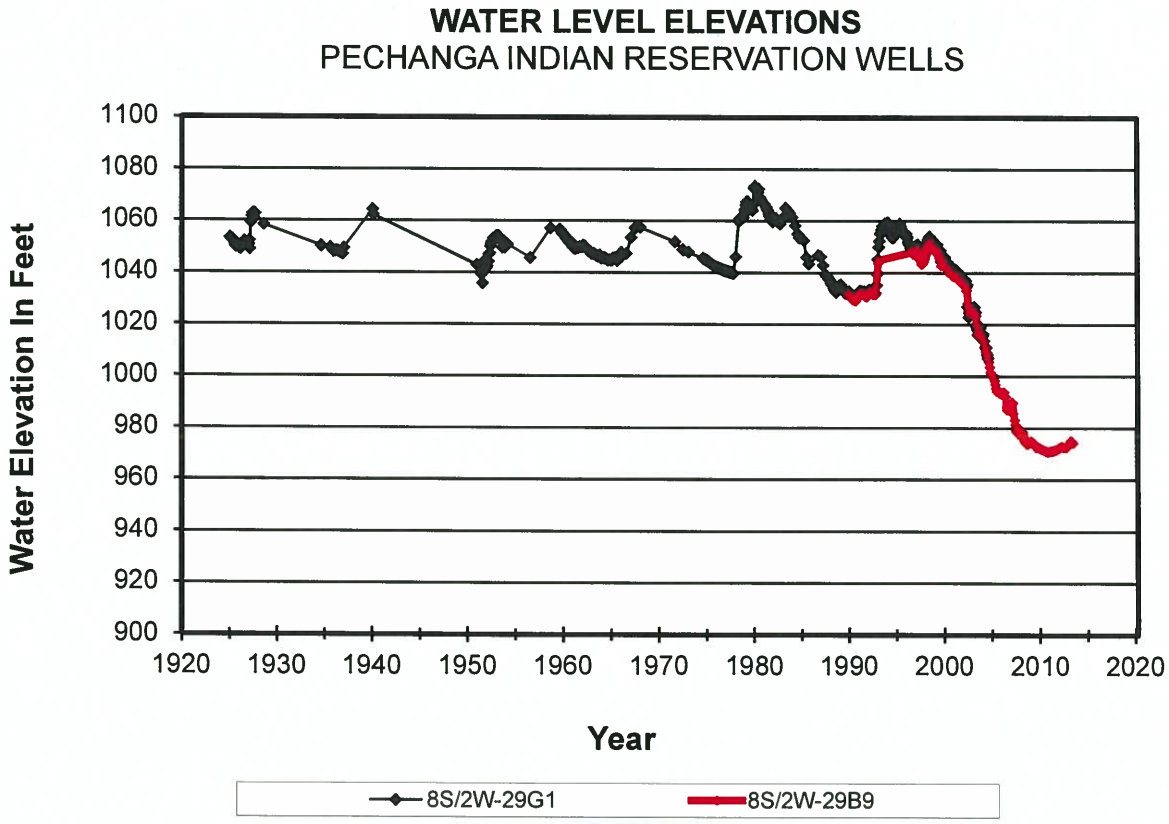
WATER LEVEL ELEVATIONS [1]
7S/3E-21G1 - ANZA MUTUAL WATER COMPANY WELL NO. 1



[1] Static water levels plotted after April 1999
Ground El. 3862.6 Feet; Depth 260 Feet; Perf. 20 - 260 Feet; Drilled in Alluvium
Anza Mutual Water Co. Well No. 1 (1987-2013); DWR Bulletin 91-22 (1950-73)

Figure 4.5 shows water levels at Well No. 8S/2W-29G1, located in Wolf Valley on the Kelsey Tract of the Pechanga Indian Reservation. The well is not used for water production. Water levels collected since 1925 reflect unconfined groundwater levels. As shown on Figure 4.5, the groundwater levels have fluctuated within an approximate 40 foot range above and below elevation 1,050 feet in response to wet years and dry periods until recently. In November 2004, this well went dry due to the preceding relatively dry hydrological conditions and pumping of the nearby New Kelsey Well on the Pechanga Reservation. In order to continue to monitor water levels on the Pechanga Indian Reservation, water levels for Well No. 8S/2W-29B9 are also shown on Figure 4.5. Well No. 8S/2W-29B9 is completed in the younger alluvium. As shown on Figure 4.5, water levels for Well No. 8S/2W-29B9 coincide with water levels for the common period of record for Well No. 8S/2W-29G1. Water levels in Well 8S/2W-29B9 rose by 1.8 feet in 2012-13.

Figure 4.5



8S/2W-29G1: Ground El. 1091.1 Feet; Depth 159.1 Feet
8S/2W-29B9: Ground El. 1075.93 Feet; Depth 113.0 Feet
U.S. Geological Survey Records

Changes in water levels in the above noted wells between the end of the previous water year and the end of the 2012-13 Water Year are shown below:

Well	Water Elevation 2012 Feet	Water Elevation 2013 Feet	Change in Water Level Feet	
RCWD 8S/2W-12H1	1,123.7	1,120.0	Down	3.7
USMC 10S/4W-7J1	85.9	87.2	Up	1.3
WMWD 7S/3W-20C9	1,025.0	1,026.0	Up	1.0
Anza MWC 7S/3E-21G1	3,767.6	3,757.6	Down	10.0
Pechanga IR 8S/2W-29B9	972.2	974.0	Up	1.8

4.4. Groundwater Storage

Bulletin 118 Update 2003 prepared by the State of California Department of Water Resources describes three groundwater basins in the Santa Margarita River Watershed: Santa Margarita Valley, Temecula Valley, and Coahuila (Cahuilla) Valley. These basins are also known as the Santa Margarita Groundwater Basin, the Murrieta-Temecula Groundwater Basin, and the Anza Groundwater Basin. Groundwater storage in each of these basins is described in this section.

4.4.1 Santa Margarita Groundwater Basin

The Santa Margarita Groundwater Basin is located along the Santa Margarita River at Camp Pendleton and includes three sub-basins: Upper, Chappo, and Ysidora. Useable groundwater storage is summarized on Table 4.2. Table 4.2 shows that the total combined storage for all the sub-basins between the depths of 5 and 100 feet is 48,100 acre feet. However, much of that storage is below sea level. Thus, the useable capacity is considered to be 28,700 acre feet as shown on Table 4.2. In 2012-13, useable groundwater storage in place was computed for all three sub-basins to be 24,677 acre feet. The useable storage in place for the three sub-basins amounted to 25,467 acre feet in 2011-12. Thus, there was a decrease in groundwater storage in place of 790 acre feet for the water year. It may be noted that classification of storage as useable is made without allowances for maintenance of riparian habitat.

TABLE 4.2

SANTA MARGARITA RIVER WATERSHED
GROUNDWATER STORAGE AT CAMP PENDLETON

1/ Computed by USGS (Worts, F. C., Jr. and Boss, R. F., *Geology and Ground-Water Resources of Camp Pendleton, CA, July 1954)* as the storage between depths of 5 and 100 feet.
2/ Storage between 5 foot depth and sea level.
3/ Storage between 5 foot depth and 10 feet above sea level.
4/ Well 10S/4W-18L1 was destroyed during 2012, depth to water extrapolated from measurements for Well 10S/5W-13G1.
5/ Reported by Camp Pendleton based on NAVD88 datum.
6/ Reported by Camp Pendleton as average values for month of September unless noted otherwise.
7/ Average area estimated over depth interval for unused storage.
8/ From Worts and Boss for depth interval of 5 to 50 feet.
9/ Useable storage includes stored water reserved for riparian habitat; however specific amount stored for such purposes not delineated.

4.4.2 Murrieta-Temecula Groundwater Basin

The Murrieta-Temecula Groundwater Basin is located along Murrieta and Temecula creeks in the Upper Santa Margarita River Watershed. Total groundwater storage at the end of Water Year 2001 was computed for each of 22 hydrologic sub-areas that make up the Groundwater Basin. These computations were based on the areal extent of each sub-area, the thickness of each of three aquifers, (younger alluvium, Pauba aquifer and Temecula aquifer), a specific yield for each aquifer, and the depth to water in each aquifer at the end of the water year. Specific yields were based on unconfined conditions for all aquifers. The total groundwater storage in the uppermost 500 feet as of September 30, 2001, was estimated at 1,340,556 acre feet.

Since 2001, annual changes in groundwater storage have been computed using two different methodologies for comparison; a water budget method and a groundwater level method.

The water budget method determines the change in storage as the difference between the major elements of inflow and outflow for the groundwater area. Table 4.3 shows the changes for Water Years 2009 through 2013. The change in groundwater storage for Water Year 2012-13, using the water budget method, is calculated as a decline of 12,674 acre feet.

The groundwater level method is based on the changes in water levels in key wells in hydrologic sub-areas. Changes in storage under the groundwater level method for Water Years 2009 through 2013 are shown on Table 4.4. The change in groundwater storage for Water Year 2012-13, using the groundwater level method, is calculated as a decline of 7,564 acre feet.

The foregoing two methods are based on independent measurements and estimates. The estimates from the two methods are generally comparable for the period 2001 through 2013. However, the estimates from the two methods for certain years indicate differences in the results. It will take testing over a number of years under varying hydrologic conditions to refine these approaches. These values will be compared with those computed with the groundwater model that is used for implementation of the CWRMA between Camp Pendleton and Rancho California WD when the model update is completed. It is noted, as part of the groundwater model update that the two methods are also being updated. A review of the various elements of the water budget method will be conducted. With respect to the groundwater level method, key wells for all sub-areas will be reviewed for suitability. The values for storativity and aquifer area will also be evaluated.

1/ Well not measured for year with dashes; Sub-area excluded for change in storage calculation for years with no measurement.
2/ Data for wells 101, 102, and 484 were revised for years 2009 and 2010.
3/ Key Well 101 designated for Sub-area 4 in Year 2011; previously Well 401 designated as the Key Well.
4/ Key Well 102 designated for Sub-area 5 in Year 2011; previously Well 402 designated as the Key Well.
5/ Key Well 484 designated for Sub-area 13 in Year 2011; previously Well 414 designated as the Key Well.
6/ Key Well 510 for Sub-area 1 renamed in Year 2012; previously the well was named as Well 301.
7/ Key Well 509 for Sub-area 16 renamed in Year 2012; previously the well was named as Well 209.
* Sub-area is located within Murrieta Division of Western MWD; Sub-areas 1 through 21 are located in Rancho California WD.
** No water level data for the Lynch Well was provided by Western Municipal Water District for Water Year 2012-13, due to incorrect groundwater level readings.

4.4.3 Anza Groundwater Basin

The Anza Groundwater Basin is located along Cahuilla Creek in the upper portion of the Santa Margarita River Watershed.

The most recent study that determined storage volumes was conducted by Riverside County in 1990. That study concluded that the groundwater storage of about 182,200 acre feet in 1950 had decreased to about 165,000 acre feet in 1986. The study also concluded that ". . . basin hydrogeologic features, production facilities' conditions, and locations/depths of storage . . ." limited the useable portion to 40% of the groundwater storage or about 56,200 acre feet in 1986.

During Water Years 2005 through 2009, groundwater level measurements were made by the USGS in Anza Valley under contract with the Bureau of Indian Affairs. In 2013, the USGS resumed groundwater level measurements as part of a study on behalf of the High Country Conservancy as the Local Project Sponsor under a California Department of Water Resources Integrated Regional Water Management (IRWM) Planning Grant. Rancho California WD is the managing agency for the Upper Santa Margarita Watershed IRWM Planning Region and contracted with the USGS to conduct the groundwater level measurements. The data from these measurements are available at the USGS website: *http://nwis.waterdata.usgs.gov/ca/nwis/gwlevels*.

The wells included in the program can be located by selecting the latitude-longitude box selection criteria and specifying the following bounds:

North Latitude - 33° 37' 00"
South Latitude - 33° 30' 00"
West Longitude - 116° 48' 00"
East Longitude - 116° 38' 00"

Page Intentionally Blank

SECTION 5 - IMPORTS/EXPORTS

5.1 General

Court Orders require the Watermaster to determine the quantities of imported water used in the Watershed. Most of the water imported into the Santa Margarita River Watershed is delivered by Metropolitan Water District of Southern California (MWD) to local districts. MWD obtains its water from the State Water Project (SWP) and the Colorado River. Both the SWP and the Colorado River system have major storage reservoirs to provide long-term carryover storage. The quantities of water in storage at the end of the water year in the major reservoirs in each system are indicated on Table 5.1. Total storage in the SWP for the last ten years is shown graphically on Figure 5.1. Similarly, total storage for the Colorado River Reservoirs for the last ten years is shown on Figure 5.2. It may be seen from Table 5.1 that during Water Year 2012-13, water in storage in the SWP decreased from 2.94 million acre feet on September 30, 2012, to 2.51 million acre feet on September 30, 2013. Storage on September 30, 2013 corresponds to about 47 percent of the total SWP storage capacity.

Water in storage in the Colorado River system decreased 4.0 million acre feet from 33.6 million acre feet in the prior year to 29.6 million acre feet on September 30, 2013. On September 30, 2013, those reservoirs contained 46 percent of their total combined capacity.

The California Department of Water Resources prepares projections of water availability in the SWP for the coming year (2014) on a monthly basis from February through May. The report DWR Bulletin 120-4-14 dated May 1, 2014, indicated that statewide precipitation October 1 through April 30 was 50 percent of average compared to 75 percent last year. As of May 1, 2014, the SWP allocation for 2014 will meet five percent of contractors' requests.

The following entities imported water directly or indirectly from MWD into the Santa Margarita River Watershed:

Eastern Municipal Water District
Elsinore Valley Municipal Water District
Fallbrook Public Utility District
Rainbow Municipal Water District
Rancho California Water District
U. S. Naval Weapons Station – Fallbrook Annex
Western Municipal Water District

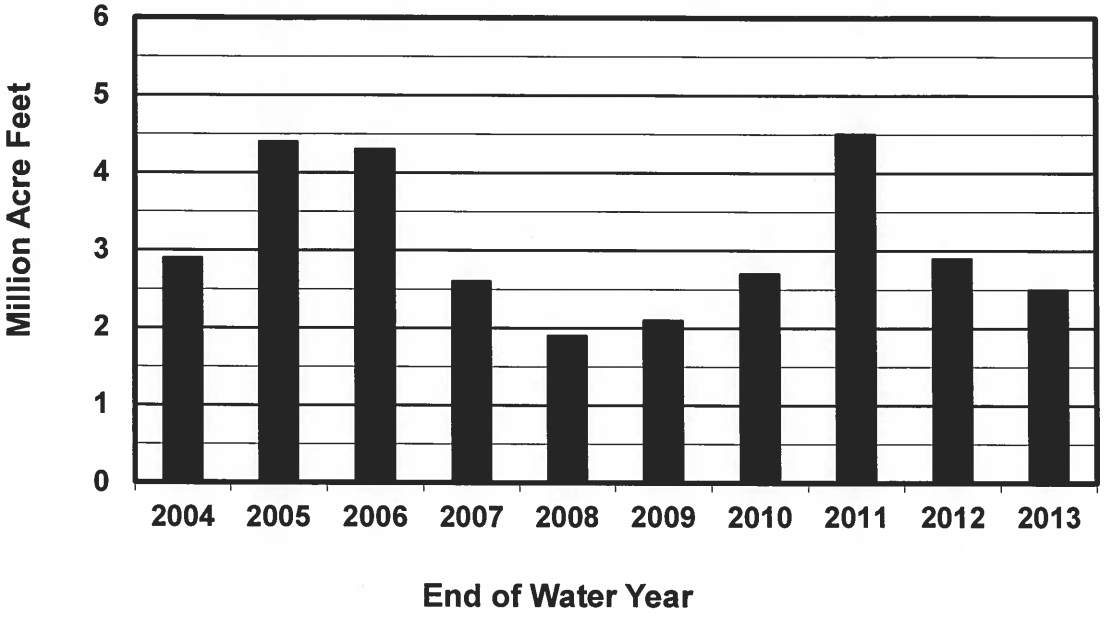

Figure 5.2

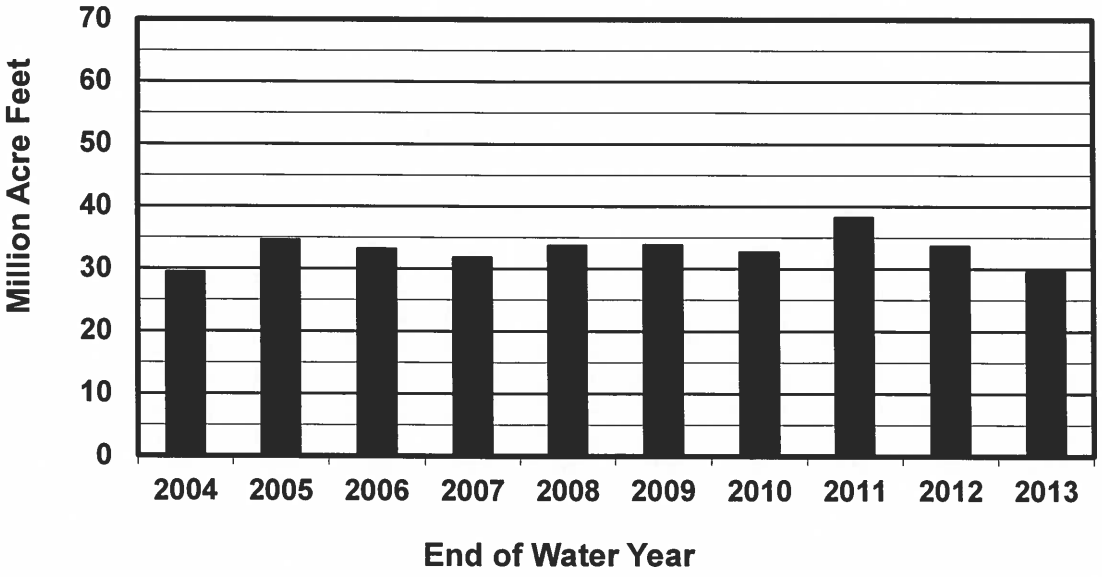
STORAGE IN COLORADO RIVER RESERVOIRS
Water Years 2004 Through 2013
Total Capacity is 64.4 Million Acre Feet



In addition to net deliveries through member agencies, MWD, pursuant to a Court Order, imported 892 acre feet of water into the Santa Margarita River Watershed for irrigation of lands in Domenigoni Valley during 2012-13.

Water is also imported into the Santa Margarita River Watershed from adjacent watersheds. Such importation occurs from the Santa Ana Watershed where Elsinore Valley MWD delivers water to a portion of its service area that is inside the Santa Margarita River Watershed. Elsinore Valley MWD obtains its supply from imports or from wells outside the Santa Margarita River Watershed.

At Camp Pendleton there is a pipeline connection to wells located in the Las Flores Creek Watershed to the north of the Santa Margarita River Watershed. Water can be either imported or exported through that line, depending on relative water demands and pumping capacities.

Exportations from the Santa Margarita River Watershed include water pumped at Camp Pendleton that is used in the San Luis Rey River Watershed to the south or in the Las Flores Creek Watershed to the north. The wastewater that is derived from the exported potable water is returned to the Watershed for treatment at the Southern Region Tertiary Treatment Plant. Reclaimed wastewater is used for irrigation both within and outside the Watershed. Treated wastewater in excess of reclaimed use is exported for discharge at the Oceanside Outfall. Wastewater from the Fallbrook area and the Naval Weapons Station is exported by the Fallbrook Public Utility District and wastewater in the Elsinore Valley MWD is exported by Elsinore Valley MWD. Rancho California WD exports water into the San Mateo Creek Watershed.

Eastern MWD uses a 24-inch pipeline along Winchester Road to transport wastewater from the Temecula Valley Regional Water Reclamation Facility to areas within the Watershed for reuse as well as for export of up to 10 MGD from the Watershed. Eastern MWD uses a second, 48-inch pipeline along Palomar Valley for delivery of reclaimed wastewater for reuse and export from the Watershed. Rancho California WD also delivers wastewater to the Palomar Pipeline under an agreement with Eastern MWD to provide coordinated operation of their respective wastewater systems and thus such wastewater originating from Rancho California WD can also be reused or exported through the operation of the Palomar Pipeline by Eastern MWD. The exported wastewater can be reused outside the Watershed, delivered to storage facilities or discharged to Temescal Creek. In 2012-13, Eastern MWD's export of wastewater that was discharged to Temescal Creek was 683 acre feet. During 2012-13, Rancho California WD had no deliveries of wastewater to the Palomar Pipeline and thus no export of wastewater for discharge to Temescal Creek can be attributed to wastewater originating from Rancho California WD.

The following paragraphs of this report describe imports and exports during Water Year 2012-13 and during the period 1966 through 2013. A discussion of MWD's Lake Skinner and Diamond Valley Lake operations is also provided.

5.2 Water Year 2012-13

During 2012-13, a total of 74,889 acre feet of net imported supplies were distributed for use in the Santa Margarita River Watershed. This compares with 75,440 acre feet in 2011-12 and represents a decrease of approximately one percent. The term net imports is used because several entities report gross imports into the Santa Margarita River Watershed but due to system configurations and operations, a portion of the gross imports may be transported to serve areas outside of the Watershed. Thus, the net imports reflect the quantities of imported supplies used within the Santa Margarita River Watershed. Net imports into the Watershed are listed on Table 5.2 for Water Year 2012-13.

The water exported from the Watershed for 2012-13 primarily includes wastewater except for Camp Pendleton and Rancho California WD. As described in Section 7, Camp Pendleton exports native water for use outside the Watershed. Also, Rancho California WD exports groundwater as part of a blended water supply to serve customers in the San Mateo Watershed. Exports from the Watershed for 2012-13 were 18,325 acre feet as shown on Table 5.2. This compares to 18,898 acre feet in 2011-12 and represents a decrease of about three percent.

The quality of the water supplies imported through the MWD system in 2012-13 is indicated by the average monthly total dissolved solids at the Skinner Treatment Plant effluent line as shown on Table 5.3. The table also shows the percent of imported water obtained from the SWP. Water imported by Elsinore Valley MWD has the same quality as the MWD system.

5.3 Water Years 1966 through 2013

Water quantities imported by districts into the Santa Margarita River Watershed during Water Years 1966 through 2013 are shown on Table 5.4. Total imports to these districts are measured; however some districts serve lands outside the Watershed. For these districts, which include Eastern MWD, Elsinore Valley MWD, Fallbrook PUD and Rainbow MWD, the portion delivered in the Santa Margarita River Watershed must be estimated.

Review of the historical trend of total imports shown on Table 5.4 indicates significant year-to-year variations with relatively low imports in wet years and higher imports in dry years, combined with an underlying growth rate to serve increasing municipal water demands in the Murrieta-Temecula area.

Exports over the period 1966 through 2013 are also shown on Table 5.4. These include estimated water exports on Camp Pendleton less estimated wastewater returns, as well as an estimate of exports by Fallbrook PUD and the Naval Weapons Station after 1983, and Elsinore Valley MWD after 1986. Exports by Eastern MWD were initiated in 1992-1993, and Rancho California WD began quantifying export of water in 2002-03. Exports do not include water that naturally flows from the Santa Margarita River into the Pacific Ocean.

1/ Includes DeLuz Heights MWD prior to 1991.

2/ Metropolitan Water District direct deliveries in Domenigoni Valley plus miscellaneous maintenance releases beginning 2009.

3/ For period 2003 to present, values shown are net imports excluding imported water delivered to San Mateo Watershed.

4/ Improvement District A - Rainbow Canyon Only (WR-13).

5/ All exports are wastewater except as noted for Camp Pendleton and Rancho Cal WD.

6/ Includes export of native water plus wastewater from in-basin use.

7/ Includes groundwater used in San Mateo Watershed and wastewater exported to Santa Ana Watershed.

8/ Includes export of native water plus reclaimed wastewater.

9/ Fallbrook PUD's total export data were revised in 2011 due to reporting methodology changes. In 2012, Fallbrook PUD's total SMRW import data were revised due to error in reporting Lake Skinner diversions delivered.

N/R - Not Reported
P - Partial year data
E - Estimate

5.4 Lake Skinner

Lake Skinner is a 44,000 acre foot reservoir constructed by MWD on Tucalota Creek, within the Santa Margarita River Watershed. The purpose of Lake Skinner is to provide regulatory and emergency storage capacity for water imported to southern California. MWD does not have a water right to store or divert local water in Lake Skinner. Accordingly, a Memorandum of Understanding and Agreement on Operation of Lake Skinner (MOU), dated November 12, 1974, approved by the Court on January 16, 1975, contains provisions to protect Santa Margarita River Watershed water users from potential effects of Lake Skinner on either subsurface or surface flows.

Protection against a decrease in subsurface flows caused by the dam is afforded by a provision in the MOU that requires MWD release water from Lake Skinner into Tucalota Creek if groundwater levels in Well AV-28B fall below an elevation of 1356.64 feet. During 2012-13, MWD released 4.00 acre feet for the specific purpose of groundwater replenishment to ensure the groundwater elevation in Well AV-28B was maintained above the indicated threshold elevation. For comparison purposes, the groundwater elevation was 1357.50 feet on September 27, 2013, a decline of 1.6 feet compared to 1359.10 feet on September 28, 2012.

In addition, operations at Lake Skinner periodically require miscellaneous maintenance releases from Lake Skinner into Tucalota Creek that also replenish groundwater levels. In 2012-13, MWD released 46.78 acre feet from Lake Skinner into Tucalota Creek for purposes of miscellaneous maintenance. An additional 24.50 acre feet were released from various points throughout the MWD distribution system for maintenance purposes.

The MOU also provides that all local surface inflow that enters Lake Skinner will be released into Tucalota Creek. In its 1980 modification, the MOU provides that local surface inflow is to be determined by using the hydrologic equation for Lake Skinner that is specified in the MOU. That equation is used to determine inflow and the related release for large flood events. However, in many years the local inflow is small compared to the large quantities of imported water inflow and outflow at Lake Skinner. The error of measurement for these large inflows and outflows is larger than the local inflow in many instances. Accordingly, MWD also monitors the flow in Tucalota Creek, Rawson Creek and Middle Creek during storms and uses those observations to supplement the hydrologic equation.

On February 16, 2005, the Court approved an Order Amending the MOU to provide for diversion from Lake Skinner on Fallbrook PUD's behalf after specified releases are made, according to State Water Resource Control Board Permit 11356 and the amended Lake Skinner MOU. In 2012-13, MWD records show no local inflow to Lake Skinner and subsequently there were no required releases in accordance with the MOU. In 2012-13, no water was accumulated in Lake Skinner for diversion to Fallbrook PUD.

5.5 Diamond Valley Lake

Diamond Valley Lake is located in Diamond and Domenigoni Valleys within the Santa Margarita River Watershed. The lake was created by three dams, one each at the east and west ends of Domenigoni/Diamond Valley and a saddle dam at the low point on the north rim. The East Dam diverts surface and groundwater flows from a 4.2 square mile drainage area in the Santa Margarita River Watershed, known as Goodhart Canyon, into the Santa Ana River Watershed. The West Dam intercepts existing westward surface and subsurface flows from an additional 13.19 square mile area.

MWD does not have a water right to store local waters in the reservoir, now known as Diamond Valley Lake, so a Memorandum of Understanding and Agreement on Operation of Domenigoni Valley Reservoir (MOU) was developed and approved by the Court on January 19, 1995. Among other things, the MOU provides:

> The quantity and quality of surface runoff that would flow past the West Dam in the absence of the Reservoir will be determined and a like quantity of water of similar quality will be released from the Reservoir or San Diego Canal (SDC) into Warm Springs Creek.

The MOU indicates that the required releases would be determined by measuring the surface inflows into Goodhart Canyon Detention Basin. A quantity equal to 4.1 times the measured flow will be released into Warm Springs Creek.

There were no required releases into Warm Springs Creek during 2012-13.

Although all surface waters within the Santa Margarita River Watershed in Domenigoni Valley and Diamond Valley are subject to the continuing jurisdiction of the Court, groundwater contained within the alluvium, north of the south line of Section 9, Township 6 South, Range 2 West, SBM is not considered by the Court to be a part of the Santa Margarita River system as long as groundwater levels are below an elevation of 1400 feet. During 2012-13, groundwater elevations in Well MO-6, which is located along the south line of Section 9, declined 4.65 feet from 1369.58 feet at the beginning of the water year to 1364.93 feet on October 9, 2013.

During 2012-13, there were no injections into the Domenigoni Valley groundwater basin pursuant to Agreements for Mitigation of Groundwater. However, pursuant to a Court Order, MWD imported 892 acre feet of water into the Santa Margarita River Watershed for irrigation of lands in Domenigoni Valley. As previously noted, the groundwater in the Domenigoni Valley groundwater basin is outside this Court's jurisdiction when groundwater levels are below an elevation of 1400 feet.

SECTION 6 - WATER RIGHTS

6.1 General

The Santa Margarita River Watershed is adjudicated in accordance with the Modified Final Judgment and Decree filed on April 6, 1966, in the U.S. District Court, Southern District of California in *U.S.A. v. Fallbrook Public Utility District, et al.* Water is used in the Watershed under a variety of water rights, as more specifically described in the Interlocutory Judgments incorporated into the Modified Final Judgment and Decree, as primarily riparian rights and overlying rights. Riparian rights belong to owners of land parcels located adjacent to streams in the Watershed or overlying younger alluvium deposits generally along the stream channels. Overlying rights were divided by the Court into two categories based on the location where the water is obtained and used. Water extracted from lands where subsurface waters add to, contribute to and support the Santa Margarita River stream system was found to be subject to the continuing jurisdiction of the Court. Lands in this category were identified by the Court and listed in Interlocutory Judgments. In general, these parcels of land overlie younger or older alluvium deposits. The Court has stated that the issue of apportionment of water rights has not been presented to the Court, but the Court would litigate the apportionment if and when in the future it becomes necessary to do so.

The other category of overlying use applies to parcels of land where subsurface flows do not add to, contribute to or support the Santa Margarita River stream system. These parcels were also identified by the Court and found to be outside the continuing jurisdiction of the Court. In general, these lands overlie basement complex or residuum deposits.

The Court also described a number of other rights in the Watershed. These included surface water appropriative water rights that have been administered by the State of California since 1914. These rights are discussed in the following subsection of this report.

In Interlocutory Judgment No. 41, the Court found that the United States reserved rights to the use of the waters of the Santa Margarita River stream system which under natural conditions would be physically available on the Cahuilla, Pechanga and Ramona Indian Reservations, including rights to the use of groundwater, sufficient for the present and future needs of the Indians residing thereon. In Interlocutory Judgment No. 44, the Court recognized and reserved water rights for lands within the Cleveland and San Bernardino National Forests and for lands being administered pursuant to the Taylor Grazing Act.

Since the early 1960's, there have been substantial changes in water use in the Watershed, especially in the Murrieta-Temecula Groundwater Area. During the 1950's and early 1960's, when this case was under active litigation, most of the water use in the Murrieta-Temecula area consisted of individual property owners pumping water for use on their own properties. In 1965, the Rancho California WD was formed. The District developed Agency Agreements with most of the landowners within the District. In these Agency Agreements, the landowners "...without transferring any water rights and privileges

pertaining to said land..." designated the District as their exclusive agent for the development and management of their water supply. Thus, many landowners within the Rancho California WD are not exercising their overlying rights. Instead, Rancho California WD pumps groundwater and uses it throughout the District area as agent on behalf of the landowners.

The resulting change is that Rancho California WD presently produces groundwater in the Murrieta-Temecula Groundwater Area under a variety of rights: (1) recovery of water appropriated at Vail Lake, (2) recovery of import return flows and recharged imported water, (3) groundwater appropriative rights, and (4) as agent on behalf of the overlying landowners. Classification of Rancho California WD supplies into these various water right categories is discussed in Section 7 of this Report. Related to the change associated with Rancho California WD production is the increased production by Western MWD within its Murrieta Division. As discussed in Section 7 of this Report, all groundwater production in the Murrieta Division by Western MWD is classified as production from the older alluvium under a groundwater appropriative right.

Another change from the early 1960's is the large scale importation of water into the Santa Margarita River Watershed by Rancho California WD. A portion of such importation finds its way into the groundwater aquifers. The legal status of return flows from imported supplies as well as direct recharge of imported water was clarified by the final judgment in *City of Los Angeles v. City of San Fernando, et al.*, 1975 14 Cal.3rd 199. This decision in the Supreme Court of the State of California made two major findings with respect to imported water.

The first was that agencies have the right to recharge and store imported water in a groundwater basin and to extract the imported water for use, subject to applicable state and federal laws. In addition, agencies that import and deliver water to lands overlying a groundwater basin have a continuing right to extract the return flow from such water. The return flow is that portion of the imported supply that percolates into the groundwater basin. In the San Fernando case this portion was found to range from 20 percent to 35.7 percent of the imported supplies.

The Rancho Division of the Rancho California WD overlies the Murrieta-Temecula Groundwater Area. Thus a portion of the import supply delivered to the Rancho Division of Rancho California WD percolates into the underlying aquifers. Imported water is also supplied to the Santa Rosa Division within Rancho California WD, however only a relatively small part of this division overlies the Murrieta-Temecula Groundwater Area. Thus there is less imported water return flow from the Santa Rosa Division.

Camp Pendleton representatives contend that the Court has jurisdiction over imported water to the full extent that imported water, as well as its use, its returns and its products, affects in any significant manner the water rights within the Watershed over which the Court has traditionally asserted its jurisdiction. Other parties dispute the Court's jurisdiction over imported water.

6.2 Appropriative Surface Water Rights

Another broad category of water rights used in the Watershed is surface water appropriative rights. Since 1914, these rights have been administered by the State Water Resources Control Board (SWRCB).

A list of current permits, licenses and other active rights obtained from the SWRCB is shown on Table 6.1. A permit by the SWRCB authorizes water diversion, sets terms for the water project's completion and development of water use, and may impose other conditions. After the permittee demonstrates that construction is complete, water is being put to use and the permit conditions have been met, the SWRCB can issue a license. The license remains in effect as long as the license conditions are met and the water is put to beneficial use.

Active direct diversion rights and storage rights from creeks in the Watershed are summarized below:

	Direct Diversions Gallons Per Day	Storage Acre Feet
Cahuilla Valley	720	5
Cottonwood Creek	485,000	60
Cutca Creek	5,825	---
DeLuz Creek	4,700	100
Fern Creek	213,000	100
Kohler Canyon	158,000	40
Long Canyon Spring	89	---
Rainbow Creek	---	0.5
Rattlesnake Canyon	12,000	---
Temecula Creek	13,050	40,000
Tucalota Creek	---	10,000
Sandia Canyon	---	8
Sourdough Spring	55	---
Santa Margarita River	96,730	4,000
Nelson Creek	1,550	---
TOTAL	990,719	54,313.5

These direct diversion rights of 990,719 gallons per day correspond to 1.53 cfs or 3.04 acre feet per day.

TABLE 6.1

IN - Industrial *W - Fish & Wildlife Protection and/or Enhancement*

NOTES: ** Federal Filing* *** Statement of Diversion and Use* **** Stock Filing*

1/ These three water rights (A011587, A012179, and A021471B) were assigned to the U.S. Bureau of Reclamation by Fallbrook Public Utility District and the Department of the Navy in 1974 for purposes of developing the Santa Margarita River Project for the benefit of Fallbrook Public Utility District and Department of the Navy Marine Corps Base Camp Pendleton.

Storage rights shown in Table 6.1 include 185,000 acre feet of storage rights on the Santa Margarita River held by the U. S. Bureau of Reclamation that have not been exercised. These three water rights (A011587, A012179, and A021471B) were assigned to the U.S. Bureau of Reclamation by Fallbrook Public Utility District and the Department of the Navy in 1974 for purposes of developing the Santa Margarita River Project for the benefit of Fallbrook Public Utility District and Department of the Navy Marine Corps Base, Camp Pendleton. The deadline for exercising these rights is currently set at December 31, 2008. On November 14, 2008, the U. S. Bureau of Reclamation filed petitions for time extensions for completion of beneficial use under the three permits. On September 14, 2009, change petitions were filed to amend the permits to conform to the Santa Margarita Conjunctive Use Project being developed jointly by the U. S. Bureau of Reclamation, Department of the Navy Marine Corps Base, Camp Pendleton, and Fallbrook Public Utility District. Those extension and change petitions have been accepted and in accordance with SWRCB Order 2009-0063-EXEC they are under consideration in tandem.

Table 6.1 also lists other rights recognized by the SWRCB. These rights generally are based on Statements of Water Diversion and Use that have been filed with the SWRCB. Such statements include one by the United States on behalf of the Cleveland National Forest, which states that the diversion and use of water from Long Canyon Spring is made pursuant to a withdrawal and reservation of the land and resources for National Forest System purposes as of February 14, 1907.

Besides the federal filing, there are also Statements of Water Diversion and Use filed by other entities. Four of these statements represent riparian or pre-1914 appropriative diversions from DeLuz Creek, Fern Creek and Santa Margarita River that have been reported to the SWRCB. The other statement represents a pre-1914 appropriative right to divert water from a spring in Kohler Canyon into a 40 acre foot reservoir.

The last two rights noted on Table 6.1 represent filings made in 1977 pursuant to Subchapter 2.5 to Chapter 3 of Title 23 of the California Code of Regulations. That subchapter deals with Water Rights for Stockponds.

In addition to appropriative rights under SWRCB jurisdiction, there are a number of non-statutory appropriative rights that were established prior to 1914. These rights continue to be used to support diversions of water from the Santa Margarita River stream system. Such rights, which are listed in the various Interlocutory Orders developed in this litigation, are shown on Table 6.2.

On November 19, 1998, the SWRCB adopted Order No. 98-08 entitled "Order Revising Declaration of Fully Appropriated Stream Systems" to revise its prior Order Nos. 89-25 and 91-07. These Orders list the Santa Margarita River stream system as fully appropriated "from the mouth of the Santa Margarita River at the Pacific Ocean upstream including all tributaries where hydraulic continuity exists."

TABLE 6.2

SANTA MARGARITA RIVER WATERSHED
PRE - 1914 APPROPRIATIVE WATER RIGHTS
Listed in Interlocutory Judgments

INTERLOCUTORY JUDGMENT	LISTED OWNER	CURRENT OWNER	DATE OF APPROPRIATION	SOURCE OF WATER	POINT OF DIVERSION	AMOUNT	USE
NO. 32	Anderson, Nina B.	Poladian, Jacqueline	April 11, 1892	Fern Creek	NW 1/4 of SE 1/4 Sec 31, T8S, R4W	32 gpm	Irrigation
NO. 32	Butler, Lawrence W. and Mary C.	Vanginkel, Norman Tr and Vanginkel, Deborah Tr San Diego Gas & Electric	Sept. 23, 1896	Fern Creek	NW 1/4 of SE 1/4 Sec 31, T8S, R4W	Capacity of 8 inch pipe	Irrigation
NO. 32	Wilson, Samuel M. and Hazel A.	Shirley, Bobbie	Aug. 3, 1911	DeLuz Creek	NW 1/4 of SW 1/4 Sec 32, T8S, R4W	50 miner's inches 65 AF/yr	Irrigation
NO. 24	United States	United States	1883	Santa Margarita River	Sec 5, T10S, R4W	20 cfs 1200 AF/yr	Domestic Irrigation Stock Water

The consequences of this Order are as follows:

1. The Board is precluded from accepting any application to appropriate water from the Santa Margarita River System except where the proposed appropriation is consistent with conditions contained in the Declaration.

2. Initiation of a water right, pursuant to the Water Rights Permitting Reform Act of 1988 (Water Code Section 1228 *et seq.*), by registering small use domestic appropriations is precluded, except where the proposed appropriation is consistent with conditions contained in the Declaration. Small use domestic appropriations refer to uses that do not exceed direct diversions of 4,500 gallons per day or diversion by storage of 10 acre feet per year for incidental aesthetic, recreational, or fish and wildlife purposes.

3. Pursuant to Water Code Section 1206(a) the Board is authorized, but not required, to cancel pending applications where inconsistent with conditions contained in the Declaration; previous Orders implement a procedure for disposition of such applications pending on the effective date of the Declaration.

The Order provides for reconsideration of the Order either upon petition of an interested party or upon the Board's own motion.

6.3 Fallbrook PUD Changes of Point of Diversion and Place of Use for Permit No. 11356

On November 20, 2001, the Chief of the Division of Water Rights of the State Water Resources Control Board authorized an Order Approving Changes in Source Point of Diversion, Place of Use and Amending the Permit (No. 11356). The permit allows Fallbrook PUD to divert and store up to 10,000 acre feet per year at Lake Skinner. The Court approved an Order Amending the Memorandum of Understanding and Agreement on Operation of Lake Skinner on February 16, 2005. The Amendment provides for diversions from Lake Skinner after specified releases are made.

On December 18, 2009, Fallbrook PUD filed a petition for a time extension for completion of beneficial use under Permit No. 11356. The petition was accepted and noticed by the SWRCB on February 23, 2009, and no protests were filed.

On May 25, 2012, the SWRCB issued Order WR 2012-0007-EXEC with an amended Permit No. 11356 extending the time to apply the water to full beneficial use by December 31, 2048.

6.4 Federal Reserved Water Rights for Cahuilla and Ramona Indian Reservations

The Cahuilla and Ramona Indian Reservations are both located in the Anza area. The Court found in Interlocutory Judgment No. 41 that the United States reserved water rights for the reservations as specified below.

Order No. 3 in Interlocutory Judgment No. 41 specifies for the Cahuilla Indian Reservation the following:

> IT IS FURTHER ORDERED, ADJUDGED AND DECREED that the United States of America intended to reserve, and did reserve, rights to the use of the waters of the Santa Margarita River which under natural conditions would be physically available on the Cahuilla Indian Reservation, including rights to the use of ground waters, sufficient for the present and future needs of the Indians residing thereon with priority dates of December 27, 1875, for lands transferred by the Executive Order of that date; March 14, 1887, for lands transferred by the Executive Order of that date; December 29, 1891, for lands transferred by the Executive Order of that date.

Order No. 1 in Interlocutory Judgment No. 41 specifies for the Ramona Indian Reservation the following:

> IT IS ORDERED, ADJUDGED AND DECREED that the United States of America when it established the Ramona Indian Reservation intended to reserve and did reserve rights to the use of waters of the Santa Margarita River stream system which under natural conditions would be physically available on the Ramona Reservation, including rights to the use of ground waters, sufficient for the present and future needs of the Indians residing thereon with a priority date of December 29, 1891.

On October 6, 2006, the Cahuilla Band of Indians filed a Motion to Intervene as Plaintiff-Intervenor in *United States of America v. Fallbrook Public Utility District, et al.* The Cahuilla Band also filed a Complaint asking the Court to quantify its federal reserved water rights by confirming elements of the water rights as declared and decreed by the Court in Interlocutory Judgment No. 41. On October 16, 2006, the Ramona Band of Cahuilla filed a similar motion and Complaint. On January 22, 2007, the Court issued an Order granting the Motions to Intervene and filing the Complaints in Intervention. On February 25, 2009, the Court ordered the Cahuilla Band and Ramona Band as plaintiffs to serve by April 30, 2009, all water right holders subject to the Court's jurisdiction within the entire Watershed. Service was completed and the parties commenced settlement negotiations. On April 1, 2009, the Cahuilla and Ramona Bands filed motions to dismiss claims against certain downstream defendants and to file second amended complaints to limit the claims to the Anza-Cahuilla Groundwater Area. On April 29, 2009, the Court issued an Order granting the motions. The parties are progressing with settlement negotiations and Court proceedings for quantification of each Band's federal reserved water rights based on the Second Amended Complaints.

6.5 Federal Reserved Water Rights for Pechanga Indian Reservation

The Court found in Interlocutory Judgment No. 41 that the United States reserved water rights for the Pechanga Indian Reservation in accordance with Order No. 7:

> IT IS FURTHER ORDERED, ADJUDGED AND DECREED that the United States of America intended to reserve, and did reserve, rights to the use of the waters of the Santa Margarita River stream system which under natural conditions would be physically available on the Pechanga Indian Reservation, including rights to the use of ground waters sufficient for the present and future needs of the Indians residing thereon with priority dates of June 27, 1882, for those lands transferred by the Executive Order of that date; January 9, 1907, for those lands transferred by the Executive Order of that date; August 29, 1893, for those lands added to the Reservation by Patent on that date; and May 25, 1931, for those lands added to the Reservation by Patent of that date.

In 1974, the Pechanga Band of Luiseño Mission Indians filed a Motion to Intervene as a Plaintiff-Intervenor in *United States of America v. Fallbrook Public Utility District, et al.*, and in 1975 the Court granted the Motion. Rather than filing a complaint asking the Court to quantify its federal reserved water rights, the Pechanga Band is in the process of resolving its claims to water rights in the Santa Margarita River Watershed through a comprehensive settlement agreement with the United States and principal water districts, including Rancho California WD, Eastern MWD, and Metropolitan Water District. On December 17, 2009, Pechanga and Rancho California WD announced an agreement on a framework, developed with the assistance of Metropolitan Water District and the United States Federal Negotiating Team, to resolve Pechanga's water rights claims. On April 27, 2009, Pechanga and Rancho California WD agreed to a Settlement Conceptual Agreement and on June 11, 2009, the Rancho California WD Board approved the Settlement Conceptual Agreement. On November 16, 2009, the parties announced the Pechanga Water Rights Settlement Agreement was finalized. On December 11, 2009 and January 26, 2010, the Pechanga Indian Water Rights Settlement Act was introduced in the United States House of Representatives and Senate, respectively. The proposed legislation was reintroduced in the Senate on June 25, 2013, and in the House of Representatives on June 26, 2013. The parties are now in the process of finalizing agreements in anticipation of Congressional and Court approvals.

Page Intentionally Blank

SECTION 7 - WATER PRODUCTION AND USE

7.1 General

Water production and use data were obtained from several types of substantial users including water purveyors, Indian Reservations, mobile home parks and private landowners. Private landowners who qualify as substantial water users are those who irrigate eight or more acres or who produce or use an equivalent quantity of water.

Major water purveyors, who reported production and use data in the 2012-13 Water Year, are listed as follows:

Anza Mutual Water Company
Eastern Municipal Water District
Elsinore Valley Municipal Water District
Fallbrook Public Utility District
Lake Riverside Estates
Metropolitan Water District of Southern California
Rainbow Municipal Water District
Rancho California Water District
U. S. Marine Corps, Camp Pendleton
U.S. Naval Weapons Station, Fallbrook Annex
Western Municipal Water District

Lake Riverside Estates is listed with major water purveyors although it does not deliver water to customers. However it does produce make-up water for losses from Lake Riverside.

In addition to the major purveyors, there are a number of smaller water systems in the Watershed. Of these, Quiet Oaks Mobile Home Park, Jojoba Hills SKP Resort, Rancho California Outdoor Resorts, and Hawthorn Water System are substantial users.

Three Indian Reservations, the Cahuilla, Pechanga and Ramona, are noted in Interlocutory Judgment No. 41, the Judgment that pertains to Water Rights on Indian Reservations in the Watershed. Estimates and/or measurements of water production and use are reported for the Cahuilla, Pechanga and Ramona Indian Reservations.

A portion of a fourth Reservation, the Pauma Mission Reserve Tract of the Pauma Yuima Band of Luiseño Mission Indians, is also located within the Watershed. However, this Reservation was not included in Interlocutory Judgment No. 41.

The final category of water users is private landowners who use water primarily for irrigation.

The water use data collected for the 2012-13 Water Year is summarized on Table 7.1. Total imported supplies plus local production totaled 118,232 acre feet compared to 115,324 acre feet reported in 2011-12. Of that quantity, 46,345 acre feet were used for agriculture; 10,685 acre feet were used for commercial purposes; 51,499 acre feet were used for domestic purposes; 37 acre feet were discharged to Murrieta Creek; 15 acre feet were discharged to Santa Gertrudis Creek; 2,470 acre feet were discharged by Rancho California WD during 2012-13, pursuant to the CWRMA; 2,644 acre feet were exported by Camp Pendleton; and 325 acre feet were recharged by Rancho California WD to storage. It is noted, the agriculture use for Pechanga includes 393 acre feet of reclaimed wastewater and thus this amount is double counted on Table 7.1 relative to production from the Santa Margarita River Watershed. Actual agriculture use of production from the Watershed is 45,952 acre feet, reflecting the reduction of 393 acre feet of reclaimed wastewater used by Pechanga. In order for the totals to balance on Table 7.1, the 393 acre feet of reclaimed water is subtracted from the indicated loss for Pechanga as reflected in Footnote 12 for Table 7.1.

The overall system loss was 4,574 acre feet, or 3.9% of total production. System gain or loss is the result of many factors including errors in measurement, differences between periods of use and periods of production, leakage and unmeasured uses.

Monthly production and use data for major water purveyors are attached to this report as Appendix A. Uses are listed under agricultural, ag/domestic, commercial and domestic categories. The definition of agricultural, ag/domestic, commercial and domestic uses varies for the different purveyors in the Watershed. Accordingly, definitions of these uses for major water purveyors are shown on Table 7.2. It is noted that much of the non-agricultural water use in the Watershed can also be considered municipal use, which includes both the domestic and commercial uses shown in tables in this report. Similar data for Water Years 1966-2013 are summarized in tables presented in Appendix B. Appendix C presents information on substantial users outside purveyor service areas.

7.2 Water Purveyors

7.2.1 Anza Mutual Water Company

Anza Mutual Water Company's service area is in the eastern part of the Watershed in the Anza Valley. Production is from two wells: Well No. 1 drilled in 1951, and perforated from 20 feet to 260 feet; and Well No. 2 drilled later to a depth of 287 feet and perforated in the bottom 130 feet. Production for 2012-13 was approximately 28 acre feet from Well No. 1 as shown on Appendix Table A-11. Well No. 2 was not in use for 2012-13. Water levels in Well No. 1 declined 10 feet from last year.

1/ Assumes 10% system loss.
2/ Recreational Use.
3/ Construction use at Diamond Valley Lake.
4/ Includes 24,831 AF production from Older Alluvium plus 2,614 AF of Vail Recovery minus 289 AF exported to the San Mateo Watershed.
5/ Includes 27,284 AF direct use; 11,395 AF direct recharge; 2,433 AF from MWD WR-34; and minus 541 AF export.
6/ Includes 24,111 AF Ag, and 6,331 AF Ag/Domestic.
7/ Includes 37 AF discharged into Murrieta Creek; 15 AF discharged into Santa Gertrudis Creek; 2,433 AF discharged into Santa Margarita River from MWD WR-34; 0 AF from System River Meter; 45 AF from potable connection to WR-34 outlet pipe; 325 AF of import remaining in storage; and a system loss of 2,435 AF.
8/ Listed with Domestic use.
9/ Includes exports of 2,644 AF.
10/ Includes 722 AF for surface diversion plus 6,677 AF from groundwater as shown in Appendix C, minus 60 AF on the Cahuilla Reservation.
11/ Loss is equal to 10% of surface diversions.
12/ Includes a system loss of 23 AF, minus 393 AF of reclaimed wastewater from EMWD, accounted for on Table A-1. See Table A-5 for Pechanga production and use.
13/ Includes an overall system loss of 4,574 AF.
14/ An additional 75 AF were released by MWD to include 51 AF from Lake Skinner into Tucalota Creek for purposes of miscellaneous maintenance and groundwater replenishment and 24 AF from the MWD distribution system for maintenance.
15/ Stock watering.

TABLE 7.2

SANTA MARGARITA RIVER WATERSHED
DEFINITIONS OF WATER USE
BY MUNICIPAL WATER PURVEYORS
2012-13

DISTRICT	AGRICULTURAL	DOMESTIC	COMMERCIAL
EASTERN MUNICIPAL WATER DISTRICT	Row crops, sod farms, dairies, horse ranches and other miscellaneous agricultural users	Single family and multi-family residential connections	All other usage including commercial, industrial, institutional, golf courses, landscaping, temporary and construction
ELSINORE VALLEY MUNICIPAL WATER DISTRICT	Delivery of water for agricultural purposes in growing or raising for commerce, trade or industry or for use by public eduational or correctional institutions	Delivery of water to single family residential customers in single, detached residential units	Delivery of water to multi-family residential units, commercial, industrial establishments, cities, political sub-divisions or quasi-governmental associations
FALLBROOK PUBLIC UTILITY DISTRICT	AG - A commercial enterprise producing a crop/livestock/fowl on at least 1 acre fully used for ag purposes; can include incidental domestic use related to residency AG/DOM - Water used for both ag and domestic purposes	Single family, multi-unit and large domestic residences and the first 20,000 gallons used by an ag/domestic meter	Offices, businesses, schools and hydrants
PECHANGA INDIAN RESERVATION	Irrigation, including water used for golf course, parks, grass areas, and landscaping	Residential	Resort, on-Reservation businesses, tribal facilities
RAINBOW MUNICIPAL WATER DISTRICT	AG- 1 acre or more of plantable, resalable products DOM/AG - Same as Ag with a house on the parcel	DOMESTIC - Homes	Generally no commercial use in district
RANCHO CALIFORNIA WATER DISTRICT	AG - 1 acre or more of plantable, resalable products GOLF - Outside water use at golf courses VINEYARDS - Outside irrigation for vineyards AG/DOM - First 1600 c.f. for each user alloted to domestic, and the balance to agriculture LANDSCAPE - Landscaping around freeways, parking lots, office buildings, median strips, etc.	DOMESTIC - Homes MULTIPLE - Apartments and Condominiums	COMMERCIAL - Office buildings, industrial users other than agri-businesses FLOATING - Fire hydrants used during construction CONSTRUCTION - Other fire hydrants used for grading LAKE SKINNER - Recreational use at Lake Skinner MISCELLANEOUS - Schools, fire departments, parks, government agencies DETECTOR CK. METERS - Only used when there is a fire
MURRIETA DIVISION OF WESTERN MUNICIPAL WATER DISTRICT	Agricultural uses and irrigation for crops	Homes and multiple units	Businesses, public agencies, schools and construction
USMC, CAMP PENDLETON	Irrigation - Water used for ag purposes, not landscaping, golf courses or parks	Camp Supply - Includes landscaping, parks and commercial use	Reported under Camp Supply

Interlocutory Judgment No. 33 divides aquifers in Anza Valley at this location into two categories: the shallow aquifer and the deep aquifer. Based on information available to the Court, the shallow aquifer was determined to include the younger and older alluvial deposits in the Anza Groundwater Basin, and extend to a maximum but variable depth of approximately 100 feet. The deep aquifer underlies the shallow aquifer in an area about one-half mile in width and two miles in length, within portions of Sections 16, 17, 21, 22, 27 and 28 of Township 7 South, Range 3 East, SBM. Anza Mutual Water Company's wells are within the area of the deep aquifer. From the perforated intervals in the wells, it may be concluded that most of the production from Well No. 1 and all of the production from Well No. 2 are from the deep aquifer. Interlocutory Judgment No. 33 concluded that waters contained in the deep aquifer did not add to, support or contribute to the Santa Margarita River stream system and were, therefore, declared to be outside the Court's jurisdiction.

Accordingly, most of the water produced by the Anza Mutual Water Company is outside the Court's jurisdiction. The relatively small portion pumped from the shallow aquifer in Well No. 1 is pumped under a groundwater appropriative right. Data for Water Years 1989 through 2013 are shown on Appendix Table B-12.

7.2.2 Eastern Municipal Water District

Eastern Municipal Water District is a member agency of Metropolitan Water District and its service area includes a portion of the Rancho California Water District and the Murrieta Division of Western Municipal Water District. Within the Watershed, Eastern MWD wholesales water to those districts and also retails water directly to consumers. Water sold to Rancho California WD and the Murrieta Division of Western MWD is not listed in this report as imported water to Eastern MWD.

Eastern MWD's service area outside Rancho California WD and the Murrieta Division of Western MWD is located in the northern part of the Watershed. Water for Eastern MWD's retail service area is all imported with no groundwater production during 2012-13.

Imports, not including water wholesaled to Rancho California WD or the Murrieta Division of Western MWD or delivered to Elsinore Valley MWD, totaled 16,208 acre feet. A portion of that import, amounting to 457 acre feet, was exported from the Santa Margarita River Watershed for delivery to Eastern MWD's retail customers located outside the Watershed, resulting in net import to the Watershed of 15,751 acre feet. These data are shown on Appendix Table A-1.

In addition to importing fresh water, Eastern MWD also reclaims wastewater at its Temecula Valley Regional Water Reclamation Facility. Disposition of wastewater from the Temecula Valley Regional Water Reclamation Facility (TVRWRF) service area for Water Years 2011-12 and 2012-13 is shown below:

Use	2011-12		2012-13	
	Quantity	Percent	Quantity	Percent
	AF	%	AF	%
Reuse in Santa Margarita	2,364	16	2,937	20
Reuse outside Santa Margarita	8,025	54	8,316	56
Subtotal	10,389	70	11,253	76
Discharge to Dissipater at Temescal Creek	285	2	683	5
Other	4,240	28	2,776	19
TOTAL	14,914	100	14,712	100

It can be noted that the quantities of reclaimed wastewater used within the Santa Margarita River Watershed increased from 2,364 acre feet in 2011-12 to 2,937 acre feet in 2012-13. During the same period, reuse outside the Santa Margarita River Watershed increased from 8,025 acre feet to 8,316 acre feet. In 2012-13, it may be concluded that 20 percent of the wastewater is reused in the Watershed and 56 percent is used outside the Watershed. The quantity of wastewater discharged to the dissipater at Temescal Creek increased from 285 acre feet to 683 acre feet. The Other use decreased from 4,240 acre feet to 2,776 acre feet. This Other use includes changes of storage in Winchester and Sun City storage ponds, as well as evaporation and percolation losses.

Due to concerns about the potential export of native Santa Margarita water, the sources of water supply to the TVRWRF service area were determined and are shown on Table 7.3. In 2012-13, 25 percent of the supply to the service area was groundwater. Thus, the percent of groundwater supply was greater than the percentage of wastewater reused within the Santa Margarita Watershed, and on a proportional basis there was some export of native waters.

On August 4, 2009, a Judgment was entered in *United States of America and Fallbrook Public Utility District v. Eastern Municipal Water District and Rancho California Water District* (CV 04-8182 CBM (RNBx), United States District Court, Central District of California) pertaining to the contractual obligations of the 1990 Four Party Agreement and the export of treated wastewater from the Santa Margarita River Watershed. On May 17, 2011, the United States Court of Appeals for the Ninth Circuit issued an Order granting the parties' joint motion to dismiss the appeals in this matter and thus the August 4, 2009 Judgment stands. For purposes of this annual report the export of treated wastewater will be reported consistent with prior annual reports with no changes pursuant to the Judgment. The Watermaster will reevaluate the calculations and reporting to be included in future annual reports.

Estimates of water production and use for Eastern MWD for the period 1966 through 2013 are shown on Appendix Table B-1.

7.2.3 Elsinore Valley Municipal Water District

Elsinore Valley Municipal Water District provides water to its service area around Lake Elsinore, a portion of which is within the Santa Margarita River Watershed. Elsinore Valley MWD obtains its supply from ten wells, all located outside the Santa Margarita River Watershed, and also imports Metropolitan Water District water through Eastern MWD and Western MWD.

As shown on Appendix Table A-2, Elsinore Valley MWD reports for 2012-13 that 7,158 acre feet of imported water were delivered in the portion of its service area that is inside the Watershed. Also during 2012-13, 1,245 acre feet of wastewater were exported from that same area.

Production and use for Elsinore Valley MWD for the period 1966 through 2013 are shown on Appendix Table B-2.

7.2.4 Fallbrook Public Utility District

The Fallbrook Public Utility District service area is located in both the San Luis Rey River and Santa Margarita River watersheds. In Water Year 2012-13, Fallbrook PUD imported a total of 12,593 acre feet, as shown on Appendix Table A-3. Fallbrook PUD has three wells within the Santa Margarita River Watershed; however, in Water Year 2012-13, there was no production from these wells. Additionally, in 2012-13, Fallbrook PUD reported no diversions from Lake Skinner, under Permit No. 11356, resulting in a total district-wide production of 12,593 acre feet. The total production for the portion of Fallbrook PUD service area that is within the Santa Margarita River Watershed, as shown on Appendix Table A-3, is 7,357 acre feet, or about 58 percent of the total district wide production.

In 2012-13, Fallbrook PUD treated 923 acre feet of wastewater from areas served within the Watershed, of which 20 acre feet were reused in the Watershed, and the remainder was exported. The wastewater production and distribution for 2012-13 is shown on Appendix Table A-3.

Production during the period 1966 through 2013 included direct diversions from the Santa Margarita River prior to 1972, as well as imported water and well production, as shown in Appendix B. During Water Year 2010-11, Fallbrook PUD revised its reporting methods for both water production and wastewater operations. The historical water production and use for the period 1966 through 2010 are provided on Appendix Table B-3.1 reflecting prior reporting methods, particularly for previous estimates associated with the DeLuz portion of the service area. Appendix Table B-3.2 is provided to show the current water production and use reflecting the revised reporting methods. The revised reporting methods include metered deliveries for the reported uses within the Watershed and application of a district-wide loss factor.

The Fallbrook PUD wastewater production and distribution for the period 1966 through 2013 are shown on Appendix Table B-4.

7.2.5 Lake Riverside Estates

Lake Riverside Estates pumps water from Well No. 7S/2E-32C1, into Lake Riverside to replace evaporation losses. Production for 2012-13 was approximately 341 acre feet as shown on Appendix Table A-11. The production well was drilled in 1962 and is located in an area of younger alluvium in the Cahuilla Groundwater Basin. The well was drilled to a depth of 338 feet.

Interlocutory Judgment No. 33 indicates that the owners of lands in the Cahuilla Groundwater Basin have correlative overlying rights to the use of the groundwater that is the basis for this production. Data for Lake Riverside Estates for the period 1989 through 2013 are shown on Appendix Table B-12.

7.2.6 Metropolitan Water District of Southern California

Pursuant to a Court Order, Metropolitan Water District (MWD) imported 892 acre feet of water into the Santa Margarita River Watershed for irrigation of lands in Domenigoni Valley. MWD did not import any water for groundwater recharge and there was no water used for construction purposes. As previously noted, the groundwater in the Domenigoni Valley groundwater basin is outside this Court's jurisdiction when groundwater levels are below elevation 1400 feet. This production is shown on Appendix Table A-4, and production for the period 1966 through 2013 is shown on Appendix Table B-5.

7.2.7 Rainbow Municipal Water District

Rainbow Municipal Water District is located in San Diego County in the south-central part of the Watershed. In 2012-13, the District imported a total of 21,863 acre feet of water as shown on Appendix Table B-7. However, most of the District is in the San Luis Rey River Watershed and only about eight percent of the District's imported supply was delivered to the portion of the service area inside the Santa Margarita River Watershed. As shown on Appendix Table A-6, total deliveries of imported water in the Santa Margarita River Watershed in 2012-13 amounted to 1,713 acre feet.

Rainbow Municipal Water District import production for the period 1966 through 2013 is shown on Appendix Table B-7.

7.2.8 Rancho California Water District

Rancho California Water District serves water to a 99,600 acre service area in the central portion of the Watershed. The District produced water from 45 wells in 2012-13, and also imported water as shown on Appendix Table A-7. Use is shown under the categories of agriculture, ag/domestic, commercial and domestic. In Water Year 2012-13, well production of native water included 27,445 acre feet from the Murrieta-Temecula Groundwater Area. This quantity included 24,831 acre feet from the older alluvium and 2,614 acre feet of recovered Vail Lake recharge. A portion of the groundwater amounting to 289 acre feet was exported for use in the San Mateo Watershed, resulting in a net well production of 27,156 acre feet.

Import supplies totaled 41,112 acre feet of which 27,284 acre feet were used for direct use; 11,395 acre feet were recharged; and 2,433 acre feet were discharged by the District to the Santa Margarita River from MWD Meter WR-34 during 2012-13, pursuant to the CWRMA. A portion of that import amounting to 541 acre feet was exported from the Santa Margarita River Watershed to the San Mateo Watershed, resulting in net import to the Watershed of 40,571 acre feet.

During 2012-13, Rancho California WD use totaled 67,727 acre feet including 24,111 acre feet for agriculture; 6,331 acre feet for ag/domestic; 4,401 acre feet for commercial; 27,594 acre feet for domestic; 2,530 acre feet were released into Murrieta Creek, Santa Gertrudis Creek and the Santa Margarita River; 325 acre feet of import were recharged to storage; and 2,435 acre feet were system loss.

In 2012-13, Rancho California WD did not export reclaimed wastewater from the Watershed via EMWD's Palomar Valley Pipeline.

Rancho California WD produces groundwater under a variety of rights as follows:

1. Recovery of water appropriated at Vail Lake
2. Recovery of import return flows and recharged imported water
3. Groundwater appropriative rights
4. As agent on behalf of overlying landowners

Vail Appropriation

Rancho California WD's Vail Dam appropriative rights are described in Application No. 11518 as amended on June 17, 1947, and in Permit 7032 originally issued on February 18, 1948. Permit 7032 was subsequently amended on July 28, 1971, and April 22, 2009. The water right provides that the District may store up to 40,000 acre feet in Vail Lake each year between November 1 and April 30, subject to applicable limitations. The water so stored may be used for recreational uses at Vail Lake and municipal, domestic, industrial, and irrigation uses within the entire service area of Rancho California WD. Such uses may be by direct diversion from Vail Lake or by recovery of water released from Vail Lake and spread downstream in Pauba Valley. Points of re-diversion for recovery from underground storage are permitted for 12 production wells: Rancho California WD Well Nos. 109, 110, 123, 132, 152, 153, 157, 158, 210, 232, 233, and 234.

As shown on Table 3.3, there were 2,614 acre feet of releases from Vail Lake during 2012-13 for groundwater recharge. Releases from Vail Lake for groundwater recharge for the period 1980 through 2013 are shown on Appendix Table B-8.

Permit 7032 operations for 2012-13 are summarized on Table 7.4. The recovery from groundwater recharge for 2012-13 was 2,614 corresponding to the amount released from Vail Lake for recharge.

It is noted, with the issuance of the amended Permit 7032 in 2009, the place of use, purposes of use, and permitted points of re-diversion were changed. Accordingly, the reporting of Permit 7032 operations needs to be modified to reflect the changed

2/ Permitted Points of Re-Diversion RCWD Well Nos. 109, 110, 123 132, 152, 153, 157, 158, 210, 232, 233 and 234.
3/ Total pumping from Vail recovery wells is greater than amount shown as recovered under Permit 7032. Total pumping from the 12 recovery wells is shown on Table 7.8.

permit conditions. Table 7.4 was modified in 2009 to reflect the changes subject to further refinement as part of the update of the CWRMA groundwater model. The reporting on Table 7.4 reflects the assumption that all water released from Vail Lake for recharge is recovered from the younger alluvium by pumping from the permitted recovery wells. The remainder of the pumping from the younger alluvium is apportioned to direct import recharge. The updated groundwater model will be used to develop a refined accounting methodology for recharge and recovery of Vail Lake releases and imported water. The updated model will also be used to evaluate the status of and accounting for the Vail Recharge Account and the Imported Water Carryover Account.

Imported Water Return Flows

Return flows for 2012-13, based on imported water use in the Rancho Division and Santa Rosa Division are shown on Tables 7.5 and Table 7.6, respectively.

In the following tables, imported water is allocated to agricultural, ag/domestic, commercial and domestic uses in each of eight hydrogeologic areas in the Rancho Division service area and three hydrogeologic areas in the Santa Rosa Division service area. This allocation is the proportion of the total deliveries to each use that is made up of imported water. For 2012-13, 58.20 percent of the supply to the Rancho Division was imported and 63.28 percent of the supply to the Santa Rosa Division was imported.

In general the Santa Rosa Division does not overlie the groundwater area. However there are several areas classified as being in the Santa Rosa Division that do overlie the groundwater area and generate return flows from imported supplies. Data from most of these lands have been reported since December 1991.

The percentage of imported water that becomes return flow varies according to the use as follows:

Agricultural Use	25%
Ag/Domestic Use	25%
Commercial Use	10%
Domestic Use	25%

Based on the foregoing factors, the total return flow credit for 2012-13 is computed to be 4,599.27 acre feet for the Rancho Division and 334.78 acre feet for the Santa Rosa Division, as shown on Tables 7.5 and 7.6, respectively.

Some of the hydrogeologic areas overlie older alluvium and some overlie younger alluvium. Comparison of exposures of younger alluvium with maps of the District's hydrogeologic areas indicates that the Santa Gertrudis, Pauba and half of the Murrieta-Wolf areas overlie younger alluvium. The area of the Santa Rosa Division that overlies the groundwater area is one-fourth in the younger alluvium and three-fourths in the older alluvium. Import return flows in these areas can be credited against pumping from the younger alluvium. These credits for 2012-13 are 1,014.86 acre feet for the Rancho Division and 83.69 acre feet for the Santa Rosa Division, as shown on Tables 7.5 and 7.6, respectively.

Rancho California WD imported an additional 11,395 acre feet of water for groundwater recharge in 2012-13, of which 11,070 acre feet were recovered.

Division of Local Water

During 2012-13, Rancho California WD pumped 38,763 acre feet of groundwater, comprised of 27,693 acre feet of local water and 11,070 acre feet of recovered imported water. Some of this water was pumped from the younger alluvium and some from the older alluvium. The Court determined that water in both the younger alluvium and older alluvium adds to, contributes to and supports the Santa Margarita River stream system. The primary reason for differentiating between younger alluvium and older alluvium production is that, in California, production from the younger alluvium is generally considered to be governed by water rights that apply to the regulation of surface waters. Production from the older alluvium is generally considered to be governed by regulations that apply to groundwater. Of the 27,693 acre feet of local water, 77 acre feet were delivered to the Pechanga Indian Reservation under the terms of the Wolf Valley Groundwater Management Agreement. This production is shown on Appendix Table A-5.

During joint development of a groundwater model of the area it was necessary to develop estimates of the transmissivity for each aquifer. These estimates were based on pumping tests. The resulting transmissivity values were then used to estimate the relative groundwater production from each aquifer. For Rancho California WD wells, the percent production estimated to originate in the younger alluvium is shown on Table 7.7.

Production from the younger alluvium and older alluvium for 2012-13, using the percentages noted on Table 7.7 is presented on Table 7.8. It may be noted that 13,684 acre feet were pumped from the younger alluvium and 25,079 acre feet were pumped from the older alluvium in 2012-13.

The production of 13,684 acre feet from the younger alluvium, as shown on Table 7.8 is the recovery of 11,070 acre feet of direct import recharge and the recovery of 2,614 acre feet of Vail Lake recharge. Rancho California WD imported 11,395 acre feet of water in 2012-13 for direct recharge, of which 11,070 acre feet were recovered leaving 325 acre feet as unrecovered direct recharge.

Imported water carryover to 2012-13 includes the following:

		AF
1.	Carryover from 2011-12	61,290
2.	Unrecovered direct recharge in 2012-13	325
3.	Import Return Flow Credit for 2012-13	1,099
4.	Total Carryover to 2013-14	62,714

Thus, the Imported Water Carryover Account balance of 62,714 acre feet remains available to offset younger alluvium production in future years.

1/ A portion of 1,258 acre feet from Well Nos. 119, 122 and 211 was delivered to Pechanga Indian Reservation for their use.
2/ Includes 52 acre feet of releases to streams from Well Nos. 101, 108 and 118.
3/ Includes 119 acre feet pumped directly to the reclaimed system from Well Nos. 102, 121, 135, 146 and 155.

7.2.9 Western Municipal Water District

Western Municipal Water District operations within the Santa Margarita River Watershed are comprised of three categories. First, Western MWD wholesales imported water to Rancho California WD. Deliveries to Rancho California WD are included under Rancho California WD. Second, Western MWD serves water to its Murrieta Division in the vicinity of the City of Murrieta. Third, Western MWD serves imported water to its Improvement District A near the southern boundary of Riverside County, along the I-15 freeway. Improvement District A is operated by Rancho California WD under an operations and maintenance contract on behalf of Western MWD.

Murrieta Division

In November 2005, Western MWD merged with the Murrieta County Water District assuming their operations in an area in the vicinity of the City of Murrieta. Prior Watermaster Reports present information under Murrieta County Water District.

All of the Murrieta Division of Western MWD wells are located in the Murrieta-Temecula Groundwater Area. Interlocutory Judgment No. 30 indicates the younger alluvium deposits in Murrieta Valley extend in various depths to a maximum of approximately 30 feet from the ground surface.

The Court noted that it was impossible, based on evidence available in 1962, to determine with exactness the depth of the younger alluvial deposits throughout the Valley. However, the Court did retain continuing jurisdiction so that subsequent findings could be made, if needed. Older alluvial deposits are found below the younger alluvium.

Six of the seven Murrieta Division wells are perforated at depths of 106 feet or more. The Holiday Well has perforations beginning at a depth of 60 feet, which is well below the maximum depth of younger alluvium found by the Court in 1962. In addition, there has been no production from the Holiday Well since March 2006. Accordingly, all of Murrieta Division well production is from the older alluvium under a groundwater appropriative right.

In Water Year 2012-13, the Murrieta Division of Western MWD produced 815 acre feet of water from the North Well and 199 acre feet from the renovated New Clay Well, which was brought back online in September 2012. Western MWD imported 1,365 acre feet as shown on Appendix Table A-10.

The following table itemizes the production from the Murrieta Division wells:

Well Designation 7S/3W	Well Name	2012-13 Production Acre Feet	End of Water Year Depth to Groundwater in Feet 2012	2013	Well Depth Feet	Perforated Interval Feet
20	New Clay	199	252	250	940	300 – 350 370 – 470 680 – 790 830 – 900
20C9	Holiday	0	65	64	307	60 – 307
20G5	House	0	*	*	252	120 – 252
17R2	Lynch	0	77	*	212	172 – 212
18J2	North	815	280	285	650	240 – 460 500 – 640
20D	South	0	*	178	446	120 – 446
7M	Alson	0	*	*	416	106 – 416
TOTAL		1,014				

* Not reported.

Western MWD's Murrieta Division production for the period 1966 through 2013 is shown on Appendix Table B-11.

Improvement District A

In Water Year 2012-13, imports to Improvement District A amounted to approximately 35 acre feet as shown on Appendix Table A-11. Deliveries to Improvement District A through turnout WR-13 for the period 1966 through 2013 are shown on Appendix Table B-12.

7.2.10 U. S. Marine Corps - Camp Pendleton

Camp Pendleton is located on the coastal side of the Santa Margarita River Watershed. Water was provided by nine wells that produced 5,744 acre feet in Water Year 2012-13. This production is from the younger alluvium and is based on riparian and appropriative rights. In 2012-13, there was no agricultural use and 5,744 acre feet were used for Camp Supply. Camp Supply includes domestic and commercial uses as well as irrigation for landscaping and park areas. Camp Pendleton water use is located both inside and outside the Watershed. A total of 3,100 acre feet were used inside the Watershed and 2,644 acre feet were exported to areas of the Base outside the Watershed. The production and use of water for Camp Pendleton are shown on Appendix Table A-8.

Beginning in December 2008, all wastewater for Camp Pendleton is treated at the Southern Region Tertiary Treatment Plant replacing the regional treatment Plant Nos. 1, 2, 3, and 13. On March 11, 2009, the Regional Water Quality Control Board issued Order No. R9-2009-0021 for a Master Reclamation Permit for the Camp Pendleton Southern Region Tertiary Treatment Plant. Wastewater effluent is discharged to either: (1) approved areas for use of reclaimed water for irrigation purposes; or (2) the Oceanside Outfall under NPDES Permit No. CA0109347, Order No. R9-2003-0155, and Order No. R9-2008-0096. The approved areas for use of reclaimed water are located both within and outside the Watershed. In Water Year 2012-13, the total amount of reclaimed wastewater for Camp Pendleton was 2,723 acre feet as shown on Appendix Table A-8. A total of 403 acre feet were reclaimed for irrigation purposes entirely for use outside the Watershed. An additional 2,320 acre feet of reclaimed wastewater were exported by Camp Pendleton to the Oceanside Outfall.

Production and estimated use inside and outside the Watershed, as well as wastewater reclamation and use, are shown in Appendix Table B-9 for the period 1966 through 2013. It is noted, the format and reporting shown on Appendix Table B-9 were changed for the Annual Watermaster Report for Water Year 2008-09. Prior reports show for the period 1966 through 2003, reclaimed use inside the Watershed reported as recharged wastewater from ponds and recharge areas. In addition, the prior reports distinguished the source of the recharged wastewater between wastewater treated within or outside the Watershed at the various regional treatment plants. The format and reporting for Water Year 2012-13, on Appendix Tables A-8 and B-9, reflect current and anticipated operations for the foreseeable future. Accordingly, the prior format is obsolete and the reader is directed to prior reports from 2008, and earlier, for additional information regarding historical wastewater operations.

7.2.11 U. S. Naval Weapons Station, Fallbrook Annex

The U. S. Naval Weapons Station (NWS) occupies about 9,148 acres northeast of Camp Pendleton. Since 1969, the NWS has relied on imported water delivered via Fallbrook PUD for its supply. Wastewater is exported from the NWS, Fallbrook Public Utility District and the Watershed via an outfall line maintained by Fallbrook PUD with an easement across Camp Pendleton. In 2012-13, 47 acre feet were imported of which three acre feet of wastewater were exported, as shown on Appendix Table A-9. Imports and use for the period 1966 through 2013 are shown on Appendix Table B-10.

7.3 Indian Reservations

Water is used on the Indian Reservations in the Watershed in accordance with federal reserved rights described in Section 6. Water use information for the Cahuilla, Pechanga and Ramona Indian Reservations in the Watershed is described in the following sections:

7.3.1 Cahuilla Indian Reservation

In general, domestic water use on the Cahuilla Indian Reservation is not measured; however reports for 2012-13 indicate that 350 people reside on the Reservation. These residents use water primarily for domestic purposes. Annual domestic water use, based on 125 gallons per capita per day, amounts to a total annual use of about 49 acre feet from wells listed in Appendix C. In addition, reports indicate Reservation non-irrigated lands are used for the grazing of 500 cattle. Based on a daily requirement of 10 gallons per head per day, the annual use is estimated to be about six acre feet. An additional five acre feet pumped from well 7S/2E-26B3 were put to commercial use at a casino.

7.3.2 Pechanga Indian Reservation

On December 21, 2006, the Pechanga Band of Luiseño Mission Indians and Rancho California WD entered into a Groundwater Management Agreement for the Wolf Valley Groundwater Basin. The Pechanga Band and Rancho California WD agreed to jointly manage groundwater pumping from the basin and to manage the basin to protect groundwater resources. Among other things, the agreement provides for Rancho California WD to deliver pumped groundwater from its wells to Pechanga.

During 2012-13, Pechanga received 77 acre feet of delivered groundwater from Rancho California WD. In addition, the Pechanga Water System produced 798 acre feet from wells, and received 393 acre feet of reclaimed wastewater from Eastern MWD, resulting in a total production for Pechanga of 1,268 acre feet. The monthly production and uses for the Pechanga Indian Reservation are shown on Appendix Table A-5. Information about Pechanga Water System wells is shown below:

Well Designation 8S/2W	Well Name	End of Water Year Depth to Groundwater in Feet 2012	2013	Well Depth Feet	Perforated Interval Feet
29A2	Kelsey	130	146	425	105 - 415
29B10	Eduardo	156	163	697	437 - 687
29B11	Eagle III	153	178	645	275 - 635
29J3	South Boundary	144	161	350	150 - 340
28M5	Cell Tower	109	120	518	372 - 432 468 - 508
28R1	Ballpark Well	104	107	1,000	126 - 996
19Q1	Zone V Rock 1	49	46	451	210 - 430

The total groundwater pumping for the Pechanga Water System wells increased from 669 acre feet in 2011-12, to 798 acre feet in 2012-13. The total pumping in Wolf Valley by Rancho California WD Well Nos. 119, 122 and 211, for both the District's use and for delivery to Pechanga, increased from 1,202 acre feet in 2011-12 to 1,258 acre feet in 2012-13. Therefore, the total pumping in Wolf Valley for 2012-13 increased by 185 acre feet.

The wells listed above are in areas of younger alluvium at ground surface. The depth of the younger alluvium in Wolf Valley was estimated by representatives of Rancho California WD and the United States, for Rancho California WD Wells No. 495 (8S/2W-20E) and No. 119 (8S/2W-19J), to be in the range of 120 to 170 feet in depth. Thus, based on available well construction data, some of the production is from the younger alluvium and some from the older alluvium. Under state law, production from the wells that originate in the older alluvium can be considered to be under a groundwater appropriative right or an overlying right, depending on the circumstances at each well.

Production and uses for the Pechanga Indian Reservation for Water Years 1991 through 2013 are shown on Appendix Table B-6.

7.3.3 Ramona Indian Reservation

The Ramona Indian Reservation occupies 560 acres of land of which 321 acres are inside the Watershed. The water supply is provided for domestic use by two individual wells. Total production for 2012-13 is reported as 2.57 acre feet, or approximately three acre feet.

7.4 Small Water Systems

There are a number of small water systems for mobile home parks in the Watershed. These range from relatively permanent structures, to those catering to recreational vehicles and campgrounds. Water production from wells is shown on Appendix Table A-11 for Quiet Oaks Mobile Home Park, Hawthorn Water System, Rancho California Outdoor Resorts, and Jojoba Hills SKP Resort. Data for previous Water Years are shown on Appendix Table B-12.

7.5 Irrigation Water Use

Estimated water production reported by substantial users for irrigation in the Santa Margarita River Watershed is shown on Table 7.1 to be 7,339 acre feet. This quantity includes 6,623 acre feet of well production and 716 acre feet of surface diversion as shown in Appendix C.

SECTION 8 - UNAUTHORIZED WATER USE

8.1 General

From time to time, there are complaints of unauthorized water uses of various types in the Watershed. Such complaints are investigated in accordance with the powers and duties of the Watermaster. The status of the current list of unauthorized uses is described as follows:

8.2 Unauthorized Small Storage Ponds

Many small dams and reservoirs have been constructed on streams in the Watershed. The legal basis for these ponds is described in the 1988-89 Watermaster Report. Basically, the Court has held that storage of water in ponds less than 10 acre feet in capacity and used for stock watering is a valid use of riparian water. The Court has also held that:

> The temporary or non-seasonal impoundment by riparian owners for the purpose of providing a head for irrigation or for the purpose of temporarily accumulating sufficient water to make possible efficient irrigation is a proper riparian use of water.

Criteria for determining non-seasonal storage of irrigation water have yet to be developed.

8.3 Rancho California Water District Water Use

A number of unauthorized water use issues raised by the United States are settled so long as the CWRMA between the United States on behalf of Camp Pendleton and Rancho California Water District is in effect. As further explained in Section 11, many of these issues are described in Appendix F.

One area of past concern pertains to Rancho California WD's petition to the State Water Resources Control Board (SWRCB) to change the place of use, type of use and re-diversion facilities in Permit 7032. On April 22, 2009, the SWRCB issued an order and amended Permit 7032 with the desired changes and conditions to resolve concerns by Camp Pendleton and the U. S. Fish and Wildlife Service. The reporting of Vail Lake operations in accordance with Amended Permit 7032 is provided on Table 3.3 and in Section 7.2.8 under Vail Appropriation, including operations reported on Table 7.4.

8.4 Exportation of Treated Wastewater Derived from Native Waters

Camp Pendleton continues to assert that the exportation of treated wastewater, the source of which is the native waters of the Santa Margarita River System, without a legal basis for such exportation is an unauthorized water use. On May 17, 2012, the United States Court of Appeals for the Ninth Circuit issued an Order granting the parties' joint motion to dismiss the appeals in *United States of America and Fallbrook Public Utility District v. Eastern Municipal Water District and Rancho California Water District* (CV 04-8182 CBM (RNBx), United States District Court, Central District of California) and thus the August 4, 2009 Judgment in this case stands. The Watermaster is reviewing the calculations and reporting of exportation of treated wastewater for possible changes in future annual reports.

SECTION 9 - THREATS TO WATER SUPPLY

9.1 General

General threats to the long-term water supply in the Santa Margarita River Watershed, which have been described in previous Watermaster reports, are as follows:

1. High nitrate concentrations in Rainbow Creek, Anza Valley and the Murrieta-Temecula areas.

2. Potential overdraft conditions at various locations in the Watershed.

3. Potentially adverse salt balance conditions in the upper Santa Margarita River area.

4. High concentrations of arsenic, fluoride, and manganese in the Murrieta-Temecula area.

5. Quagga mussel infestation in imported supplies from the Colorado River system.

9.2 High Nitrate Concentrations

In past years, high concentrations of nitrate have been measured in Anza Valley and in Rainbow Creek. Conditions in Anza Valley were generally described in the 1993-94 report. Additional water quality data for Anza Valley have been collected periodically by the Riverside County Department of Health Services and the USGS.

As described in prior Watermaster reports, in 1999 the Regional Water Quality Control Board, San Diego Region (Regional Board) began preparation of a plan for Total Maximum Daily Loads (TMDLs) for Total Nitrogen and Total Phosphorus on Rainbow Creek. On February 9, 2005, the Regional Board adopted an amendment to the Basin Plan to include the Total Nitrogen and Total Phosphorus TMDLs and implementation plan. The State Water Resources Control Board, on November 16, 2005, and the Office of Administrative Law, on February 1, 2006, subsequently approved the Basin Plan amendment. The U.S. Environmental Protection Agency granted final approval of the TMDLs on March 22, 2006.

The full plan and implementation programs are presented on the Regional Board's website:

http://www.waterboards.ca.gov/sandiego/water_issues/programs/tmdls/rainbowcreek.shtml.

Recent data show high concentrations of nitrate pose a risk to water supplies from the Murrieta-Temecula Groundwater Area. In January 2006, Western MWD ceased production from the Holiday Well because nitrate concentrations exceeded the Maximum Contaminant Level (MCL) of 45 mg/l. The depth to the top of the perforated interval for the Holiday Well is only 60 feet and the high nitrate concentrations appear to be a result of nearby septic systems and agricultural practices. Concentrations of nitrate for some of the other Western MWD and Rancho California WD wells in the Murrieta-Temecula Groundwater Area have been detected in the range of 20 to 25 mg/l, which is below the MCL. The other Western MWD and Rancho California WD wells have deeper perforated intervals than the Holiday Well.

9.3 Potential Overdraft Conditions

Previous Watermaster reports have noted concerns about overdraft conditions in Anza Valley and in the Murrieta-Temecula Groundwater Area. Previous studies for Anza Valley include 1976 and 1988 reports by the U. S. Geological Survey and a 1990 report by a consultant to Riverside County. No further studies relative to groundwater use in Anza Valley are available. Historical measurements of groundwater levels for Anza Mutual Water Company's Well No. 1 (7S/3E-21G1) located in Anza Valley are plotted in this report on Figure 4.4.

No recent published studies of safe yield are available for the Murrieta-Temecula Groundwater Area. Groundwater resources in the area are managed by Rancho California WD, Western MWD, and the Pechanga Band. Annual groundwater production programs are prepared with the goal of maximizing production within the apparent safe yield of the basin. Each year, groundwater levels and well production combined with other information including water quality, natural and artificial recharge, pump settings, and well construction factors, are used to develop the recommended production programs for several hydrogeologic sub-areas. Production rates are commonly lowered in sub-areas where water levels have declined over several years, and production rates are increased in sub-areas where decline has not occurred. As a final check, the recommended production rates are checked using the groundwater model for the Murrieta-Temecula Groundwater Area.

In addition, Rancho California WD in cooperation with Camp Pendleton is in the process of developing a multi-level groundwater monitoring network, pursuant to the CWRMA. The purpose of the network is to collect data for use in assessing safe yield operations. In September 2006, the USGS began drilling and constructing the Pala Park Groundwater Monitoring Well as part of this network. The monitoring well was completed with six piezometers and continuous water level recording devices. In 2009, the groundwater monitoring network was expanded to include the Wolf Valley Monitoring Well previously constructed by the USGS under a cooperative program with the Pechanga Band. In 2013, two additional groundwater monitoring wells were constructed by the USGS under contract with Rancho California WD. The two additional wells are the Temecula Creek Groundwater Monitoring Well and the VDC Recharge Basin Groundwater Monitoring Well. Groundwater levels and water quality data for the four monitoring wells are reported in the annual report for the CWRMA.

Groundwater level data for three additional wells in the Murrieta-Temecula Groundwater Area are included in this report as Figures 4.1, 4.3 and 4.5. Water levels in the Windmill Well (8S/2W-12H1) located at the eastern part of Pauba Valley declined by 3.7 feet in 2012-13. Water levels in Well 7S/3W-20C9 in the Murrieta Division of Western MWD area rose by 1.0 feet in 2012-13.

Well 8S/2W-29G1 on the Pechanga Indian Reservation in Wolf Valley became dry at the end of 2003-04. The declining water levels in Well 8S/2W-29G1 appear to be attributed to recent relatively dry hydrologic conditions and pumping of the nearby New Kelsey Well. To allow continued monitoring of water levels on the Reservation, Well No. 29G1 has been replaced with Well No. 8S/2W-29B9 which showed water levels rose 1.8 feet in 2012-13.

9.4 Salt Balance

A key issue in management of a groundwater basin is potential build-up of salts from imported water supplies and use of reclaimed wastewater. Such a build-up could decrease the usability of waters in a basin. Consideration must be given to measures that allow desalination of water supplies and export of salts from a basin to offset the salt load in water entering the groundwater basin.

The Total Dissolved Solids (TDS) concentration for imported supplies into the watershed is shown on Table 5.3. During 2012-13, the reported TDS concentration ranged from 336 to 528 mg/l as compared to concentrations for 2011-12 ranging from 261 to 459 mg/l. The increased levels for TDS in 2012-13 are attributed to a greater percentage of the imported supplies derived from the Colorado River compared to supplies from the State Water Project.

The salt balance for the Murrieta-Temecula Groundwater Area is increasingly of interest due to increased imported supplies to meet existing and future demands, and also increased use of reclaimed wastewater for irrigation. The potential salt loading can be illustrated by estimating the total salts imported into the basin by the major purveyors overlying the groundwater area. The net imported supplies for the major purveyors are provided on Table 5.2 and the individual production and use tables are included in Appendix A. Assuming the groundwater area is subject to salt loading from net imports for Eastern MWD, Elsinore Valley MWD, Western MWD (Murrieta Division), and Rancho California WD (Rancho Division); the total net imports for Water Year 2012-13 were 50,699 acre feet. It is noted, imports for a portion of the Rancho California WD, Santa Rosa Division, potentially contribute to salt loading for the groundwater area but such contribution is ignored for this illustration. Applying the monthly TDS concentrations from Table 5.3 to the monthly net imports for these major purveyors results in an estimated total annual salt import for 2012-13 of 32,200 tons compared to the estimated salt import of 26,400 tons for 2011-12.

The salt balance for the Murrieta-Temecula Groundwater Area is affected by the export of wastewater from the Watershed. In 2012-13, Elsinore Valley MWD exported 1,245 acre feet of wastewater for treatment outside the Watershed. During 2012-13, Eastern MWD exported 8,316 acre feet of treated wastewater for reuse outside the Watershed and 683 acre feet were exported for operational reasons for discharge to Temescal Creek. Additional treated wastewater may have been exported from the Watershed through recirculation in the system, but such additional amounts have not been determined. At an average TDS concentration of 650 mg/l, there are approximately 1,768 pounds of salt in every acre foot of wastewater. Thus in 2012-13, approximately 9,100 tons of salt were exported by Elsinore Valley MWD and Eastern MWD through the export of 10,244 acre feet of wastewater. For comparison in 2011-12, approximately 8,400 tons of salt were exported with the export of 9,515 acre feet of wastewater.

The use of reclaimed wastewater for irrigation is also a consideration in evaluating the salt balance for the Murrieta-Temecula Groundwater Area. The reuse within the groundwater area does not import additional salts into the Watershed; rather the source of water supply further concentrates the salts in contrast to relatively lower TDS levels for other sources of water supplies. The total use of reclaimed wastewater by Eastern MWD, Rancho California WD, and the Pechanga Band within the Santa Margarita River Watershed for 2012-13 was 5,866 acre feet compared to 5,601 acre feet in 2011-12, and compared to 690 acre feet in 1986-87. Assuming an average TDS concentration of wastewater of 650 mg/l, the salt loading for 5,866 acre feet of reclaimed wastewater is approximately 5,200 tons. It is expected that the use of reclaimed wastewater within the Watershed will increase in the future.

The salt balances of the Murrieta-Temecula Groundwater Area, the Santa Margarita River, and the groundwater basins on Camp Pendleton are affected by operational and maintenance discharges by Rancho California WD from wells into Murrieta Creek, Temecula Creek and Santa Gertrudis Creek. In 2012-13, wells discharged 52 acre feet, as shown below, together with estimated total dissolved solids for each well. Additional water quality data for the wells are provided in Appendix D.

Well No.	Release Acre Feet	TDS mg/l	Sample Date
101	10	700	9/11/13
108	15	400	8/13/13
118	27	600	9/17/13
Total	52		

The salt balances for the Santa Margarita River, and the groundwater basins on Camp Pendleton, are also influenced by discharges by Rancho California WD of imported supplies into Santa Margarita River as part of make-up flows under the CWRMA. During 2012-13, the discharge of imported supplies to the Santa Margarita River as make-up

flows from outlet WR-34 was 2,433 acre feet. An additional 45 acre feet were discharged to the Santa Margarita River from the potable connection at WR-34. Discharges from the potable connection are comprised of a blend of groundwater and imported supplies.

In March 2014, Rancho California WD completed the Temecula Valley Basin Salt and Nutrient Management Plan. The plan was prepared pursuant to the State Water Resources Control Board Recycled Water Policy adopted by Resolution No. 2009-0011 on February 3, 2009, as amended by Resolution No. 2013-0003 on January 22, 2013. In November 2012, Camp Pendleton completed the Salt and Nutrient Management Plan, Southern MCB Camp Pendleton, also prepared pursuant to the State Water Resources Control Board Recycled Water Policy cited above.

9.5 High Arsenic Concentrations

The maximum contaminant level (MCL) for arsenic is 10 ug/l. High concentrations of arsenic have been detected in groundwater wells for both the Murrieta Division of Western MWD and Rancho California WD, posing a risk to water supplies in the Murrieta-Temecula Groundwater Area. In November 2007, Western MWD ceased pumping from the New Clay Well due to arsenic levels exceeding the MCL. Pumping from the New Clay Well resumed in September 2012, under an approved monitoring plan after Western MWD completed well renovation measures. Pumping from the New Clay Well was again ceased in April 2013 due to arsenic levels exceeding the MCL.

The elevated arsenic levels have significantly impacted groundwater pumping and distribution system operations for Rancho California WD. Two wells have been taken out of production due to arsenic levels exceeding the MCL. In 2012-13, three other wells showed levels exceeding the MCL with the wells still in operation under approved blending plans. Two additional wells showed levels approaching the MCL and may be included in a blending plan in the future.

9.6 High Fluoride Concentrations

The MCL for fluoride is 2 mg/l, and samples exhibiting high concentrations of arsenic often show high concentrations of fluoride in the Murrieta-Temecula Groundwater Area. High levels of fluoride are impacting operations for Rancho California WD. In 2012-13, two wells showed fluoride levels exceeding the MCL with the wells in operation under approved blending plans.

9.7 High Manganese Concentrations

The MCL for manganese is 50 ug/l, and high concentrations of manganese have been detected in wells for both the Murrieta Division of Western MWD and Rancho California WD. In 2012-13, two Rancho California WD wells showed manganese levels exceeding the MCL with the wells in operation under approved sequestering plans. In 2012-13, eight groundwater supply wells for Camp Pendleton showed manganese levels exceeding the MCL with groundwater treated under approved treatment plans.

9.8 Quagga Mussel

In early January 2007, the invasive, non-native Quagga mussel was discovered in Lake Mead. Subsequently, upon thorough inspection, MWD discovered the mussel throughout the Colorado River Aqueduct system including in August 2007, finding the mussels in Lake Skinner. To date, no mussels have been found in Diamond Valley Lake.

The Quagga mussel is indigenous to the Ukraine and was discovered in the United States in September 1989 with the first sighting in the Great Lakes. The Quagga mussel is a small freshwater mollusk ranging in size from microscopic in the embryonic state to about two inches in length at the adult stage. The mussels can be transported during the larval stage with currents or running water, and at the adult stage by attaching to hard surfaces, such as boats.

The Quagga mussel is a filter feeder removing food and nutrients from the water column, decreasing the food source for zooplankton and therefore, altering the food web. The filtration of the water also alters water clarity impacting aquatic plants and water chemistry. The economic impact is also significant because these species can rapidly colonize on hard surfaces, clogging water intake structures, pipes, and screens and reducing pumping and distribution capacities. Costs are also associated with maintenance of facilities and control of the species.

Since the discovery of Quagga mussels in the Colorado River Aqueduct and Lake Skinner, MWD has implemented various control activities. In July 2007, the aqueduct was shut down for ten days for inspection, chlorination, and removal of adult populations. Also in July 2007, MWD initiated continuous chlorination in the Colorado River Aqueduct to control the spread of Quagga mussels. Additionally, as part of ongoing maintenance activities for the Colorado River Aqueduct, MWD subsequently shut down the aqueduct in October, January and March 2008, October 2009, and April and May 2010, for approximately three weeks each shutdown, resulting in desiccation of Quagga mussels present at those times. Releases from Lake Skinner are chlorinated at the outlet tower prior to distribution through the raw water delivery system.

Effective October 10, 2007, Assembly Bill 1683 added Section 2301(a)(1) to the California Fish and Game Code prohibiting the release of Quagga mussels into the waters of the State. Assembly Bill 1683 also requires development of a Quagga mussel control plan. On December 8, 2007, MWD temporarily suspended required releases of water to Tucalota Creek from Lake Skinner and Warm Springs Creek from the San Diego Canal near Diamond Valley Lake. These required releases would have been made in accordance with Memoranda of Agreement for releasing native inflows from the reservoirs. On March 6, 2008, MWD provided notice to the parties in *United States of America v. Fallbrook Public Utility District, et al.*, regarding the temporary suspension of required releases of native water inflows from Lake Skinner and Diamond Valley Lake.

On June 23, 2008, MWD provided notice to the parties in *United States of America v. Fallbrook Public Utility District, et al.*, regarding the resumption of required releases of native water inflows from Lake Skinner and Diamond Valley Lake, according to MWD's Action Plan submitted to California Department of Fish and Game on May 30, 2008. On April 5, 2010, the California Department of Fish and Game approved the Quagga Mussel Control Plan for Lake Skinner. MWD is still operating under the May 30, 2008 Action Plan and June 23, 2008 Notice describing provisions for releases to Warm Springs Creek from the State Water Project Eastside Pipeline to meet release requirements at Diamond Valley Lake.

Infestation by the Quagga mussel has also altered Rancho California WD operations in accordance with the CWRMA. Beginning on April 10, 2008, Rancho California WD periodically ceased making releases of raw water from Turnout WR-34 on the MWD Pipeline No. 5 to meet make-up flow requirements for the Santa Margarita River. Alternatively, Rancho California WD releases make-up flows from its treated water distribution system at the System River Meter located just upstream of the Murrieta Creek at Temecula gaging station, or from the potable connection to the WR-34 discharge location. The treated water is de-chlorinated prior to release into Murrieta Creek.

On July 17, 2009, Rancho California WD submitted its Quagga mussel response and control action plan to the California Department of Fish and Game. Key components of the plan include:

- Substrate monitoring utilizing coupon sampling equipment at Vail Lake and the Santa Margarita River at a sampling location approximately 100 feet downstream of the Outlet WR-34 for releases of make-up water in accordance with CWRMA.

- Raw MWD water is released into the Santa Margarita River only when chlorination is being performed at Lake Skinner.

- All watercraft vessels, trailers, and equipment are being inspected before launching in Vail Lake.

In addition, Rancho California WD has developed a Quagga mussel response and control plan for the Vail Lake Conveyance System to deliver imported supplies for storage in Vail Lake.

Page Intentionally Blank

SECTION 10 - WATER QUALITY

10.1 Surface Water Quality

The USGS collected continuous water quality measurements for dissolved oxygen, pH, specific conductance, and temperature at the Santa Margarita River near Temecula gaging station during 2012-13. Data collected at the station are published by the USGS. The highest average daily high and the lowest average daily low for each parameter for each month are shown on Table 10.1 for months in Water Year 2012-13.

Surface water quality data collected by the USGS in 2004-05 for Cahuilla Creek are shown on Appendix Table D-12. No surface water quality data for Cahuilla Creek were collected in 2012-13.

Surface water quality data collected in prior years by Camp Pendleton, Eastern MWD, and Rancho California WD are listed in earlier Watermaster reports.

10.2 Groundwater Quality

During 2012-13, water quality data was collected from wells at Western MWD – Murrieta Division, Rancho California WD, Pechanga Indian Reservation, and Camp Pendleton.

Western MWD – Murrieta Division sampled two wells in 2012-13 as shown in Appendix Table D-3. Both wells were subjected to standard chemical analysis in addition to samplings for nitrates only. The North Well was sampled 24 times and included 11 samples subjected to standard chemical analysis, 12 samples subjected to nitrates only, and one sample subjected to TDS only. The New Clay Well was sampled 12 times and included seven samples subjected to standard chemical analysis and five samples analyzed for nitrates only. Concentrations of nitrates were below the Maximum Contaminant Level (MCL) of 45 mg/l as nitrate for samples in the two wells was generally reported to be below or near the laboratory detection limit with the highest reported value as 1.1 mg/l.

Water quality data for Rancho California WD wells are shown on Appendix Table D-4. Samples were collected from 41 wells during 2012-13. Of the 41 wells, 28 wells were analyzed for nitrates and TDS only. Nitrate concentrations ranged up to 22 mg/l as nitrate, with the MCL being 45 mg/l as nitrate. Twelve of the remaining wells were subjected to standard chemical analysis, 35 wells were sampled for TDS only, and 11 wells were sampled for nitrates only. Samples from two wells (Well 109 and Well 120) showed TDS concentrations exceeding 750 mg/l, the Basin Plan objective. Well 158, which showed TDS concentrations exceeding 750 mg/l in prior years, showed reduced TDS concentrations for 2012-13, ranging from 470 to 740 mg/l. During 2012-13, 18 wells showed TDS concentrations ranging from 500 to 750 mg/l.

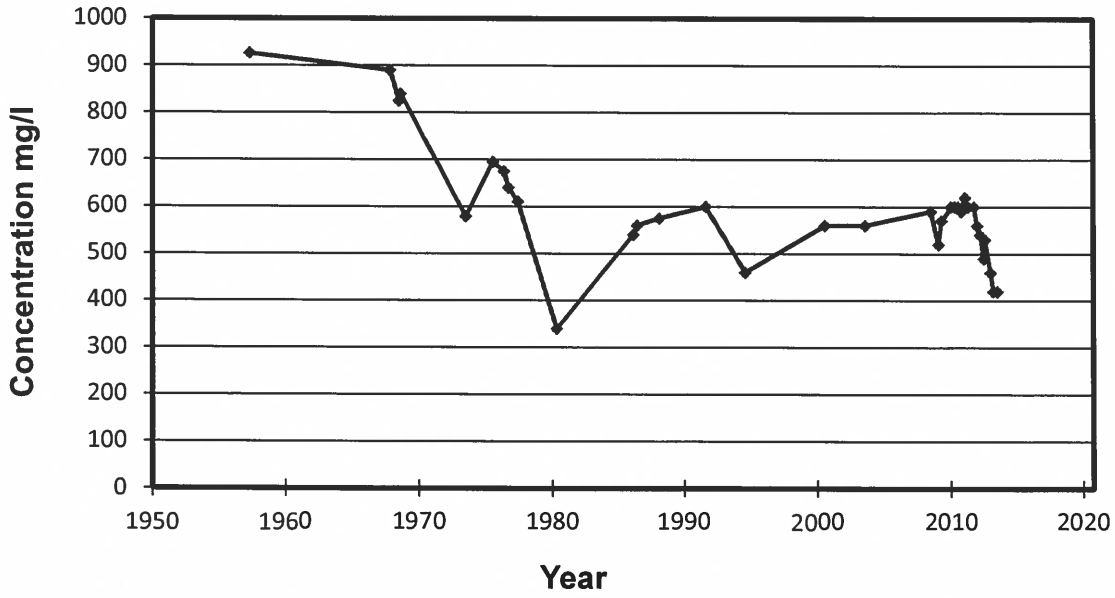
* - Partial Record: Indicates months with interruptions in record at times due to malfunction of recording equipment. High and low values indicated for days with reported data. Daily data and number of days with no record can be viewed at the following website: *http://web10capp.er.usgs.gov/adr06_lookup/search.jsp* searching by site number 11044000.

Total dissolved solids concentrations for Rancho California WD Well 210 are shown on Figure 10.1 for samples collected since 1957, when the well was constructed. The figure shows a decline in TDS from approximately 900 mg/l for the samples collected during the 1960's to the 400-600 mg/l range in recent years. Trend analyses for other wells throughout the Murrieta-Temecula area show a mix of increasing and decreasing trends in TDS levels depending upon location and aquifer.

Figure 10.1

TOTAL DISSOLVED SOLIDS CONCENTRATION
8S/2W-12K - RCWD WELL NO. 210



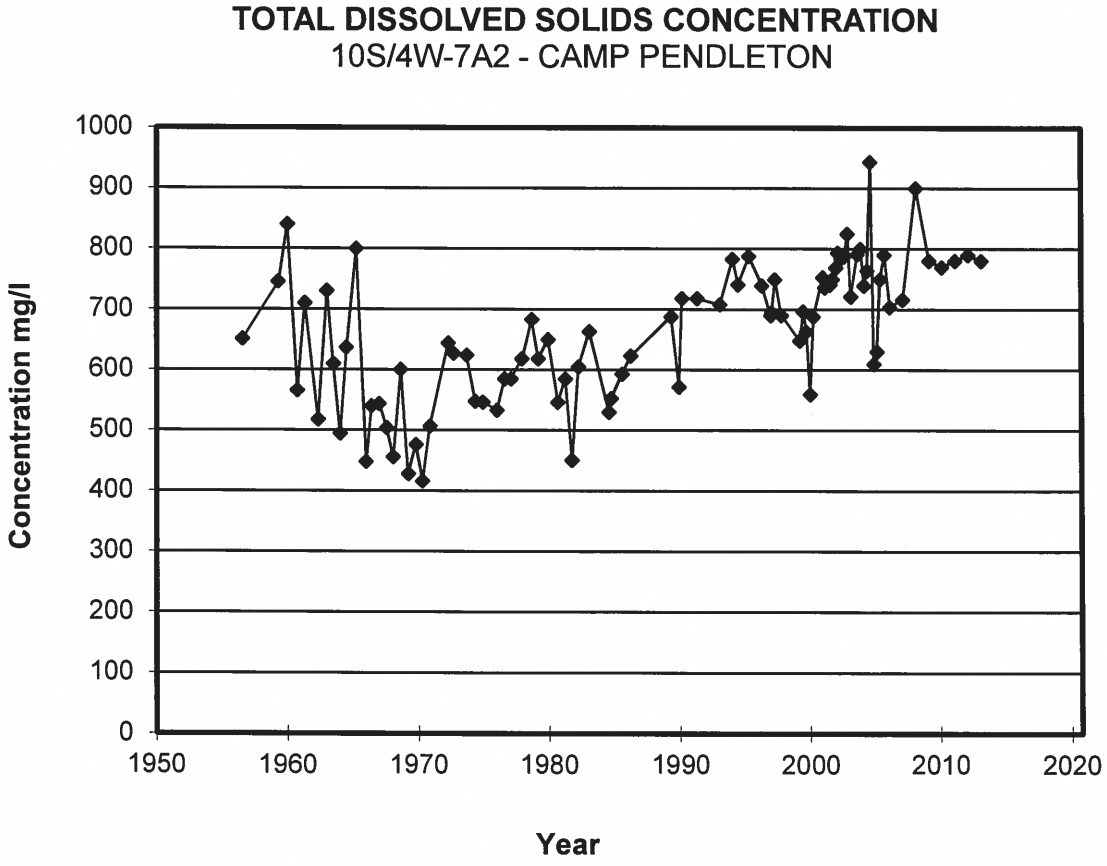
Appendix Table D-5 shows water quality data collected by the USGS from wells on Indian Reservations. In 2012-13, samples were collected from five wells on the Pechanga Indian Reservation. For the Pechanga wells, TDS concentrations ranged from 264 to 302 mg/l.

In 2012-13, no samples were collected from wells on the Cahuilla Indian Reservation.

During 2012-13, groundwater samples were collected from 11 wells at Camp Pendleton as shown on Appendix Table D-6. All 11 wells were subjected to standard chemical analysis. During 2012-13, samples show nine wells with TDS concentrations exceeding the Basin Plan Objective of 750 mg/l. Three of the 11 wells showed TDS concentrations that exceeded those in the prior year, and seven wells showed a decline of TDS concentrations compared to the previous year. One well showed the same concentration as the previous year.

Historical TDS concentrations for Camp Pendleton Well 7A2 are shown on Figure 10.2 for samples collected since mid-1950. The figure shows a decline between mid-1950 and 1970, then a period of increasing concentrations to levels in the 550-950 mg/l range. Analysis of the sample collected in 2012-13 indicated TDS concentrations of 780 mg/l, a decrease of 10 mg/l compared to the sample collected in 2011-12.

Figure 10.2



Historical nitrate concentrations for the same well (7A2) are shown on Figure 10.3. The one sample collected in 2012-13 showed a nitrate concentration of 2.1 mg/l, a decrease from the prior year.

Figure 10.3

SECTION 11 – COOPERATIVE WATER RESOURCE MANAGEMENT AGREEMENT

11.1 General

On August 20, 2002, the Cooperative Water Resource Management Agreement (CWRMA) between Camp Pendleton and Rancho California WD was approved by the Court. The CWRMA provisions specify required accounting will be reported on a calendar year basis and, accordingly, Section 11 and Appendix E present data reported on a calendar year basis. However, the remainder of the Annual Watermaster Report is prepared on a water year basis requiring the CWRMA calendar year reporting to be converted to a water year basis to be incorporated into other sections of the report. The water year period begins on October 1 and concludes on September 30 of the following year.

It is noted that prior Annual Watermaster Reports served as the annual report required under CWRMA. Beginning in calendar year 2011, a separate annual report has been prepared by the Watermaster and submitted to the Court to meet the requirements of CWRMA. Section 11 continues to be included in the Annual Watermaster Report focusing on the accounting and operations related to make-up water releases and flow requirements for the Santa Margarita River at the Gorge. Section 11 also includes an overview of other topics included in the stand-alone Annual CWRMA Report.

The CWRMA provides that on May 1 of each year, the Technical Advisory Committee is to compute a hydrologic index for the year based on streamflow and precipitation between October and April. In May 2013, the hydrologic index was determined and the year classified as a "Critically Dry" hydrologic year. The hydrologic year establishes the required flows at the Santa Margarita River near Temecula gaging station for the calendar year. Required flows for 2013, a "Critically Dry" year, are listed in Section 5 of the CWRMA and are shown on Table 11.1.

As indicated above, CWRMA calendar year accounting must be converted to a water year basis for other sections of the annual report. The data for October through December 2012 for the various accounts are needed to convert the amounts shown on Table 11.1 to water year values. These data for October through December 2012 were reported in the prior year Annual Watermaster Report. To assist the reader in calculating water year amounts for various CWRMA operations, Table 11.2 in the current report is a repeat of Table 11.1 from the prior year's report. Additional information concerning the operations underlying the values reported on Table 11.2 can be found in the prior year's report.

Prior to implementation of the CWRMA, each year there were contentions raised by Camp Pendleton with respect to various aspects of the Annual Watermaster Report. These contentions are settled so long as that agreement is in effect. Accordingly, there is no need to raise those particular issues or publish them in the main text of the annual report or in related correspondence. Rather, the issues are provided in Appendix F.

1/ Required flows for January through April are equal to 11.5 cfs less 5.9 cfs of credits (1,248 AF of Climatic Credit earned in 2012 and 148 AF CAP Credit carried over from 2011).

2/ In December 2012, the preliminary winter-time flow requirement for 2013 was calculated as 6.5 cfs; in January 2013, the final winter-time requirement was computed as 5.6 cfs. To make up for excess releases made by the District between January 1-17, 2013, the winter-time flow requirement was reduced from 5.6 cfs to 5.3 cfs for January 18 - February 28.

3/ The Table in Section 5 of CWRMA sets forth guaranteed monthly flows at the Gorge once the Hydrologic Condition for the calendar year is established.

4/ CAP Credits equal the WR-34 discharge in excess of 4,000 AF. No CAP Credits earned in 2013.

5/ Climatic Credits equal the WR-34 discharges less Actual Flow Requirements, which is the flow indicated in Section 5 of CWRMA less applicable credits but not less than 3.0 cfs.

6/ Camp Pendleton's rights to groundwater equal the flow indicated in Section 5 of CWRMA less the Actual Flow Maintenance Requirement, which cannot be less than 3.0 cfs. Input to the groundwater bank shown but cumulative balance did not increase due to account balance maximum of 5,000 AF.

CALENDAR YEAR TOTAL	**6,415.9**	**6,419.1**			**0**	**3,434.3**	**1,247.8**	**147.8**	**FULL**

1/ Required flows for January through April are equal to 11.5 cfs, less 0.6 cfs CAP Credit from 2011.
2/ In April, Camp Pendleton requested that the District reduce remaining winter-time releases and postpone that portion of the winter-time releases until May and June. For April 12-23, 2012, the Flow Requirement was reduced from 10.9 cfs to 5.0 cfs; for April 24-30, 2012, the requirement was further reduced to 3.8 cfs. For April, the District has been credited with Climatic Credit as if they had released according to the original schedule. Flow Requirements in May and June were increased as follows: 7.8 cfs for May 21-31, 2012, and 7.3 cfs for June 1-18, 2012.
3/ The Table in Section 5 of CWRMA sets forth guaranteed monthly flows at the Gorge once the Hydrologic Condition for the calendar year is established.
4/ CAP Credit equals WR-34 discharge in excess of 4,000 AF. No CAP Credits earned in 2012.
5/ From March 16-23, 2012, and from October 19-27, 2012, a portion or all of the daily releases were provided from the District's potable connection at the WR-34 pipeline. March potable releases were 65.8 AF, and October potable releases were 45.0 AF, for a total 2012 potable release of 110.8 AF.
6/ From August 6-19, 2012, and from November 19-December 12, 2012, the District conducted flow tests in which the instantaneous release rate at WR-34 varied from 0 to 13 cfs throughout the day. However, the average daily release rate remained at 3.0 cfs.
7/ Climatic Credit equals the WR-34 discharge less Actual Flow Requirement, which is the flow indicated in Section 5 of CRWMA less applicable credits but not less than 3.0 cfs.
8/ Camp Pendleton's rights to groundwater equals the flow indicated in Section 5 of CWRMA less the Actual Flow Maintenance Requirement, which cannot be less than 3.0 cfs. Input to the groundwater bank shown but cumulative balance did not increase due to account balance maximum of 5,000 AF.

11.2 Required Flows

Under the CWRMA, Rancho California WD guarantees that the ten-day running average of the measured flows at the Santa Margarita River near Temecula gaging station shall meet the Required Flows for each month during the year. In order to meet the Required Flows, Rancho California WD discharges Make-Up Water from two primary sources, both discharging into the river at the same location immediately upstream from the USGS gaging station for Santa Margarita River near Temecula. The first primary source of Make-Up Water is raw water from MWD Aqueduct No. 5 discharged at Outlet WR-34. The second primary source of Make-Up Water is from the Rancho California WD treated water distribution system through a potable connection to the WR-34 outlet pipe. In prior years, Make-Up Water was also discharged from the treated water distribution system to Murrieta Creek from two system discharge meters collectively referred to as the System River Meter. The two discharge meters are located on opposite sides of Murrieta Creek, immediately downstream of the USGS gaging station for Murrieta Creek at Temecula, which is located approximately 2,000 feet upstream of the confluence of Temecula Creek and Murrieta Creek. The System River Meter is operable as a secondary source of Make-Up Water if needed.

Flow requirements are based on two-thirds of the median natural flow of the Santa Margarita River at the Gorge for a given hydrologic year type. During the winter period (January through April), Rancho California WD shall maintain a ten-day running average equal to 11.5 cfs, less carry-over credits, less requested Foregone Make-Up Water, but not less than 3.0 cfs. Rancho California WD may earn Climatic Credits in Below Normal and Critically Dry years if it has provided Make-Up Water in excess of the Actual Requirement. The Climatic Credit is equal to the Make-Up Water released, less the Actual Requirement, less credits. The Actual Requirement is determined on May 1 of each year and applied retroactively to the flows during the winter period. During the non-winter period (May through December), Rancho California WD shall maintain a ten-day running average equal to the flow requirements specified in the Agreement as determined on May 1st, less requested Foregone Make-Up Water. When Rancho California WD is required to provide Make-Up Water in any calendar year in excess of 4,000 acre feet, it may apply CAP Credits for such excess during the following two winter periods. At no time is Rancho California WD required to make up more than 11.5 cfs.

The measured daily flows, the ten-day running average, and the differences between the running average and the Required Flows are shown in Appendix E. Two listings of daily discharges are shown in the tables in Appendix E: the USGS official discharge and the USGS website discharge. The discharges shown on the website are those that dictate daily decisions regarding the quantities of Make-Up Water required and those discharges are used to compute the ten-day running average. The official discharge is a more refined estimate developed later by the USGS for publication.

The number of days each month when the ten-day running average was less than the Required Flow is summarized on Table 11.1. For calendar year 2013, there were no days when the running average was less than the Required Flow under normal CWRMA operations.

During calendar year 2013, the total releases by Rancho California WD to meet CWRMA flow requirements were 2,562 acre feet as shown on Table 11.1. The releases were comprised entirely of raw water from WR-34. For calendar year 2013, there were no releases from the potable connection at WR-34.

Climatic Credits of 1,248 acre feet were used in calendar year 2013, and Climatic Credits of 406 acre feet were earned in calendar year 2013 in accordance with CWRMA provisions. CAP Credits of 148 acre feet were used in calendar year 2013 and no CAP Credits were accumulated in calendar year 2013 for use in subsequent years to meet required releases by Rancho California WD.

The CWRMA also provides that Camp Pendleton may acquire rights to groundwater above the Gorge by foregoing its right to Make-Up Water from the District, or to the extent that the District's Actual Flow Maintenance Requirements are less than the flows in the table in Section 5 of CWRMA. The maximum cumulative balance for the Camp Pendleton groundwater account is 5,000 acre feet. During calendar year 2013, 360 acre feet were calculated as input to the groundwater account but the balance was already at the maximum balance of 5,000 acre feet and no additional water was credited to the account.

11.3 Water Quality

The U. S. Geological Survey continuously monitors four parameters of water quality at the Santa Margarita River near Temecula gaging station, including dissolved oxygen, pH, specific conductance, and temperature. The daily averages for each of these parameters are reported annually. Monthly highs and lows for each parameter are listed in Table 10.1 for the water year ending September 30, 2013.

11.4 Monitoring Programs

The CWRMA provides for the establishment of two monitoring programs: (1) Section 5(g) provides for a program to assess the impacts of operations on water supply, water quality and riparian habitat within Camp Pendleton, and; (2) Section 7(d) provides for a program to assess safe yield operations of Rancho California WD through the use of a multi-level groundwater monitoring network and periodic updates of the CWRMA Groundwater Model.

During 2007-08, Camp Pendleton initiated the Section 5(g) program named as the Lower Santa Margarita River Watershed Monitoring Program (LSMRWM Program) to evaluate whether the increased flows under CWRMA influence threatened and endangered species, riparian and wetland habitats, or water quality downstream. The LSMRWM Program will also support other water quality monitoring and watershed

management activities in the Santa Margarita River Watershed. A copy of the Statement of Work for the LSMRWM Program was provided in the 2007 and 2008 Annual Watermaster Reports. The monitoring was funded for a two-year period and the final report, *Hydrological and Biological Support to Lower Santa Margarita River Watershed Monitoring Program Water Years 2008-2009* was published on February 21, 2010, under a cooperative program between Camp Pendleton and the United States Bureau of Reclamation.

In September 2006, the USGS under contract with Camp Pendleton and Rancho California WD constructed a multi-level monitoring well for the Murrieta-Temecula Groundwater Basin in accordance with Section 7(d) of CWRMA. The Pala Park Groundwater Monitoring Well is located near the confluence of Pechanga and Temecula creeks and was completed to a total depth of 1,499 feet. Six piezometers were installed for continuous water level recording in the saturated zone for the lower five screened intervals and for the upper-most screened interval to detect moisture in the unsaturated zone. The USGS monitoring program for the Pala Park Groundwater Monitoring Well is included in the ongoing Watermaster budget beginning in Water Year 2007-08.

In 2009, the groundwater monitoring program was expanded to include the Wolf Valley Monitoring Well that was previously constructed under a cooperative agreement between the USGS and the Pechanga Band. Two piezometers are installed at the Wolf Valley Well. Approved Watermaster funding is used for water quality sampling at the multi-level groundwater monitoring well. The groundwater level monitoring for the Wolf Valley Monitoring Well was previously funded by the Pechanga Band, but is now included in the ongoing Watermaster budget beginning in Water Year 2009-10.

In 2013, two additional groundwater monitoring wells were constructed by the USGS under contract with Rancho California WD. The groundwater level monitoring for these additional wells is also included in the ongoing Watermaster budget. The Temecula Creek Groundwater Monitoring Well was drilled in April 2013 to a depth of 1,720 feet, and was completed with five piezometers. The VDC Recharge Basin Groundwater Monitoring Well was drilled in August 2013 to a depth of 1,033 feet, and was completed with six piezometers.

Information concerning the construction of the monitoring wells, groundwater levels, and water quality data can be found at the following website: *http://ca.water.usgs.gov/temecula/*. Information obtained from the website as well as supplemental information for the groundwater monitoring wells is provided in the Annual CWRMA Report.

In 2010, 2011, and 2012, the water quality monitoring program also included collecting data for the two sources of supply for recharge at the head of Pauba Valley: (1) imported supplies for recharge at Rancho California WD VDC Recharge Facilities, and; (2) native supplies from Temecula Creek as sampled at Vail Lake. Funding from the Watermaster budget was used to collect and analyze the data which are provided in the Annual CWRMA Report.

In 2012, the water quality monitoring program also included collecting data from selected groundwater production wells operated by Rancho California WD within Pauba Valley. These wells were selected to compliment the water quality data for the monitoring wells and the two sources of supply for recharge at the head of Pauba Valley. Previously, groundwater production wells operated by Rancho California WD were included in the 2004 and 2007 sampling programs for the Groundwater Ambient Monitoring and Assessment (GAMA) program implemented by the California State Water Resources Control Board. Data reported for 2013 were collected with funding from the Watermaster budget. In 2013, funding from the Watermaster budget was used to analyze archived, age-dating samples that were collected during 2012. The samples from two groundwater production wells, Well Nos. 109 and 234, were analyzed for tritium and carbon isotopes.

In 2007, Camp Pendleton and Rancho California WD initiated an effort to update the CWRMA Groundwater Model in accordance with Section 7(d). Work on updating the groundwater model continued during 2013. The update will incorporate data collected from the Pala Park Groundwater Monitoring Well, and other wells in the Murrieta-Temecula Groundwater Basin, as well as take advantage of recent software and computing advancements.

Page Intentionally Blank

SECTION 12 - FIVE YEAR PROJECTION OF WATERMASTER OFFICE TASKS, EXPENDITURES AND REQUIREMENTS

12.1 General

Projected tasks over the next five years are listed below in two categories: normal tasks, which are part of the usual Watermaster office operation; and additional tasks, which are foreseen but are not part of the normal office operations.

12.2 Normal Tasks

Tasks that are normally part of the Watermaster Office operation are as follows:

1. Update List of Substantial Users
2. Collect Water Production, Use, Import and Availability Data
3. Collect Well Location, Construction and Water Level Data
4. Administer Water Rights
5. Collect Water Quality Data
6. Monitor Water Quality and Water Right Activities
7. Administer Lake Skinner and Diamond Valley Lake MOU's
8. Administer Steering Committee Matters
9. Prepare Court Reports/Budgets
10. Monitor Streamflow and Water Quality Measuring
11. Data Management
12. Administer Cooperative Water Resource Management Agreement

12.3 Additional Tasks

Tasks that have been identified but which are not part of normal operations are as follows:

1. Prepare List of All Water Users under Court Jurisdiction
2. Prepare Inventory of Ponds and Reservoirs
3. Determine Salt Balance

12.4 Projected Expenditures

Projected expenditures for the current year and over the next five years are listed as follows:

Year		Watermaster Office	USGS Groundwater Monitoring	USGS Gaging Stations	Total
Current Year	2013-14	$419,715	$65,300	$173,825	$658,840
Projected Years	2014-15	$446,750	$43,700	$189,250	$679,700
	2015-16	$460,200	$65,000	$194,900	$720,100
	2016-17	$474,000	$67,000	$200,700	$741,700
	2017-18	$488,200	$69,000	$206,700	$763,900
	2018-19	$502,800	$106,100	$212,900	$821,800

SECTION 13 - WATERMASTER OFFICE BUDGET 2014-2015

The budget for the Watermaster Office is established on an annual basis and is approved by the Court upon acceptance of the Annual Watermaster Report. The budget is presently funded from equal assessments paid by the Steering Committee; however, the Court retains the right to assess other parties in the future. An audit is conducted annually by an independent auditor and the independent auditor's report is submitted for review by the parties and the Court as part of the Annual Watermaster Report.

13.1 Comparison of Budget and Actual Costs for 2012-13

The Watermaster Budget for 2012-13 of $649,600 was approved by the Court upon acceptance of the September 2012 Annual Watermaster Report for Water Year 2010-11. The Independent Auditor's Report and Report to the Steering Committee for Watermaster of the Santa Margarita River Watershed for Fiscal Year Ended September 30, 2013, dated December 17, 2013, are included in Appendix G. A comparison of the budget and actual costs for 2012-13 is shown on Table 13.1. The actual costs for 2012-13 were $612,525 compared to the budget of $649,600, resulting in a favorable variance of $37,075. An explanation of individual line item variances is provided in Appendix G.

13.2 Proposed Budget for 2014-15

The proposed Watermaster Budget for 2014-15 is published in the Annual Watermaster Report for 2012-13 and is determined to be final and accepted by the Court upon noticing and completion of the 30-day period for parties to file an objection to the report. Accordingly, the budget for 2014-15 is referred to in this report as the proposed budget. The proposed Watermaster Budget for 2014-15, along with a comparison to the approved budget for 2013-14 is shown on Table 13.2. The total budget for 2014-15 is $679,700. This budget includes $446,750 for the Watermaster Office and $232,950 for USGS gaging station operations and monitoring. The budgeted cost for services provided by the U.S. Geological Survey is based on the annual renewal of a cooperative agreement with the Watermaster.

1/ Does not include deliveries to Rancho California WD, Elsinore Valley MWD or Western MWD.
2/ Portion of imported supplies exported for delivery to Eastern MWD's retail customers located outside the Watershed.
3/ Loss = 5%
4/ No sewage diverted to RCWD for 2013 Water Year for treatment at Santa Rosa Water Reclamation Facility.
Reuse within Watershed includes 1,097 AF sold to RCWD and 393 sold to Pechanga Band.
5/ Other Reuse includes changes of storage in Winchester and Sun City storage ponds, evaporation and percolation losses, and discharges to Temescal Creek in the Santa Ana Watershed of 683 AF.

1/ Diverted under Permit No. 11356.
2/ Includes 127 acre feet from Capra Well located in San Luis Rey Watershed and remaining supply from San Diego County Water Authority.
3/ A portion of the District is outside the Santa Margarita River Watershed.
4/ Loss percentage within the Santa Margarita River Watershed is determined using the calculation to determine District-wide unaccounted for water by comparing District-wide annual supply and customer deliveries, and is assumed to be constant for all months.
5/ United States Naval Weapons Station.

1/ Wells recovered 24,831 AF from older alluvium and 2,614 AF from Vail recharge. Does not include 119 AF pumped from wells 102, 121, 135, 146 and 155 directly into reclaimed water system. An additional 77 AF was delivered to Pechanga Indian Reservation and is shown on Table A-5.

2/ Groundwater used in San Mateo Watershed.

3/ Includes 27,284 AF direct use (15,030 AF to Rancho Division and 12,254 AF to Santa Rosa Division); 11,395 AF direct recharge; and 2,433 AF from MWD WR-34.

4/ Import used in San Mateo Watershed.

5/ 37 AF into Murrieta Creek from Wells 101, 102, and 118; 15 AF into Santa Gertrudis Creek from Wells 106 and 108; 0 AF from System River Meter; 45 AF from potable connection to WR-34 outlet pipe and 2,433 AF from MWD WR-34.

6/ 11,395 AF of direct recharge less 11,070 AF of import recovery.

7/ Loss = Total production less total use.

8/ Vail releases and the related Vail recharge are computed as Total Release less Inflow to be bypassed.

9/ Includes 119 AF pumped from wells 102, 121, 135, 146 and 155 directly into reclaimed water system. Does not include 1,097 AF reclaimed wastewater purchased from EMWD.

1/ There was no agricultural irrigation in Water Year 2013.
2/ Camp Supply water use is divided with 54% used inside the SMRW and 46% used outside the SMRW.
3/ Assumes no losses.
4/ Reclaimed use for irrigation of golf course, landscaping and park areas.
5/ All wastewater treated at Southern Regional Tertiary Treatment Plant (SRTTP) beginning December 2008.
6/ Agriculture and Camp Supply use outside the SMRW, reclaimed use outside the SMRW, plus Outfall to Oceanside.
7/ Percent Camp Supply reclaimed estimated as 2,723 AF divided by 5,744 AF equals 47.40%. Wastewater returns estimated at 47.40% of Camp Supply use outside of SMRW.

1/ Does not include deliveries to RCWD, Elsinore Valley MWD and Western MWD.

2/ Beginning in 2011, Use reported based on metered customer demands. Prior years reporting based on supply meter data and is not complete for all categories.

3/ Reuse within Watershed includes noted amount of sewage distributed to RCWD for treatment by RCWD, reclaimed wastewater sold to RCWD for delivery to RCWD customers, and beginning in 2009, reclaimed wastewater sold to the Pechanga Band.

4/ Other Reuse includes changes in storage in Winchester and Sun City storage ponds, evaporation and percolation losses, and discharges to the Santa Ana Watershed.

5/ Includes 905 AF of sewage diverted to RCWD.

6/ Includes 1,159 AF of sewage diverted to RCWD.

7/ Includes 1,162 AF of sewage diverted to RCWD.

8/ Includes 1,201 AF of sewage diverted to RCWD.

9/ Includes 1,219 AF of sewage diverted to RCWD.

10/ Includes 1,056 AF of sewage diverted to RCWD.

11/ Includes 574 AF of sewage diverted to RCWD.

12/ Includes 910 AF of sewage diverted to RCWD.

13/ Includes 797 AF of sewage diverted to RCWD.

1/ For period prior to 2011, assumes no loss. For 2011 to present, loss percentage within the Santa Margarita River Watershed is determined using the calculation to determine District-wide unaccounted for water by comparing District-wide annual supply and customer deliveries, and is assumed to be constant for all months.

1/ Total SMRW production equals SMRW Import plus 30% local (1966-1971).
2/ Loss = Total production less total use.

1/ Diverted under Permit No. 11356.
2/ Includes production from Capra Well located in San Luis Rey Watershed and supply from San Diego County Water Authority.
3/ A portion of the District is outside the Santa Margarita River Watershed.
4/ Loss percentage within the Santa Margarita River Watershed is determined using the calculation to determine District-wide unaccounted for water by comparing District-wide annual supply and customer deliveries, and is assumed to be constant for all months.

1/ Measured quantities available for Total Wastewater in Water Year 1969 and July 1989. All other quantities are estimated (1966-1989).

2/ San Luis Rey Watershed

3/ United States Naval Weapons Station

4/ Prior to 1983, Wastewater was discharged into Fallbrook Creek, located in the SMRW. After 1983, Wastewater was discharged into an ocean outfall located outside the SMRW.

E - Estimated

P - Partial Year Data

R - Revised

1/ 1966 through 1982 estimated to be 9% of total district imports
2/ 1966 through 1982 estimated to be 80.2% of total deliveries to watershed
3/ 1966 through 1982 estimated to be 10.7% of total deliveries to watershed
4/ Loss = 10% of total deliveries.

1/ Groundwater used in San Mateo Watershed.
2/ Import used in San Mateo Watershed.
3/ Loss = Total production less total use.
4/ Irrigation 1966 to 1976 by pumping from Vail Lake. Figures from 1966 to 1972 supplied by USGS; 1972 to 2002 supplied by RCWD.
5/ Discharge from 2MGD Demonstration project.
6/ Includes 98 acre feet from wells out of groundwater area.
7/ Import recharge was 2,294 AF but portion remaining in storage was not computed due to lack of data.
8/ Import recharge was 701 AF but portion remaining in storage was not computed due to lack of data.
9/ Does not include EMWD reclaimed wastewater production.

1/ For years 1966 - 2007, agricultural water use is divided with 39% used inside SMRW and 61% used outside SMRW, thereafter proportions provided by Camp Pendleton.

2/ Prior to 1969, 44% used inside the SMRW and 56% used outside the SMRW. For years 1969 - 2007, Camp Supply water use inside SMRW equals 44% of sum of Camp Supply production plus Naval Weapons Station Import, less the NWS Import. Annual proportions provided by Camp Pendleton beginning 2008.

3/ Assumes no losses.

4/ For years 1966 - 2003, reclaimed use inside SMRW reported as recharged wastewater from ponds and recharge areas. See prior reports from 2008 and earlier for additional information.

5/ Reclaimed use for irrigation of golf course, landscaping and park areas.

6/ All wastewater treated at Southern Regional Tertiary Treatment Plant (SRTTP) beginning December 2008.

7/ Net Export equals the sum of Agriculture Out, Camp Supply Out, Reclaimed Out and Export to Oceanside Outfall, minus Wastewater Return, as shown on Table A-8.

1/ Required flows for January through April are equal to 11.5 cfs less 5.9 cfs of credits (1,248 AF of Climatic Credit earned in 2012 and 148 AF CAP Credit carried over from 2011).

2/ In December 2012, the preliminary winter-time flow requirement for 2013 was calculated as 6.5 cfs; in January 2013, the final winter-time requirement was computed at 5.6 cfs. To make up for excess releases made by the District between January 1-17, 2013, the winter-time flow requirement was reduced from 5.6 cfs to 5.3 cfs for Jan 18 - Feb 28.

3/ Climatic Credit equals the WR-34 discharge less the Actual Flow Maintenance Requirement which is the flow indicated in Section 5 of CWRMA less applicable credits, but not less than 3.0 cfs.

4/ Art. 17 - Camp Pendleton rights to groundwater equal the flow indicated in Section 5 of CWRMA minus the Actual Flow Maintenance Requirement which cannot be less than 3.0 cfs. Input to groundwater bank shown but cumulative balance did not increase due to account balance maximum of 5,000 AF.

1/ Required flows for January through April are equal to 11.5 cfs less 5.9 cfs of credits (1,248 AF of Climatic Credit earned in 2012 and 148 AF CAP Credit carried over from 2011).
2/ In December 2012, the preliminary winter-time flow requirement for 2013 was calculated as 6.5 cfs; in January 2013, the final winter-time requirement was computed at 5.6 cfs. To make up for excess releases made by the District between January 1-17, 2013, the winter-time flow requirement was reduced from 5.6 cfs to 5.3 cfs for Jan 18 - Feb 28.
3/ Climatic Credit equals the WR-34 discharge less the Actual Flow Maintenance Requirement which is the flow indicated in Section 5 of CWRMA less applicable credits, but not less than 3.0 cfs.
4/ Art. 17 - Camp Pendleton rights to groundwater equal the flow indicated in Section 5 of CWRMA minus the Actual Flow Maintenance Requirement which cannot be less than 3.0 cfs. Input to groundwater bank shown but cumulative balance did not increase due to account balance maximum of 5,000 AF.

SANTA MARGARITA RIVER WATERSHED

ANNUAL WATERMASTER REPORT

WATER YEAR 2012-13

APPENDIX F

ANNUAL REPORT ISSUES SUBORDINATED DURING EFFECTIVE PERIOD OF THE COOPERATIVE WATER RESOURCE MANAGEMENT AGREEMENT

July 2014

APPENDIX F

SANTA MARGARITA RIVER WATERSHED

ANNUAL REPORT ISSUES SUBORDINATED DURING EFFECTIVE PERIOD OF THE COOPERATIVE WATER RESOURCE MANAGEMENT AGREEMENT

Introduction

Prior to implementation of the Cooperative Water Resource Management Agreement (CWRMA) entered into by Rancho California Water District (RCWD) and the United States on behalf of Camp Pendleton, there were contentions raised by Camp Pendleton each year, with respect to various aspects of the Annual Watermaster Report. These contentions are settled so long as CWRMA is in effect. Accordingly, there is no need to raise those particular issues or publish them in the main text of the annual report or in related correspondence.

However, the respective positions on these issues need to be preserved and protected from any finding of waiver, and there is a need to continue to collect related data in the event of need in the future.

Therefore, the applicable textual material in the previous annual reports and related comments and responses have been gathered here for preservation and maintenance of rights, with the understanding that the previous annual exchange of applicable contentions in the process of preparing the annual report is no longer necessary.

Issues Reserved

Section 3, Surface Water Availability and Use: In the absence of CWRMA implementation, Camp Pendleton disputes the method of calculation used in the annual report in Subsection 3.2 (Surface Water Diversions) and Table 3.3 (Surface Water Diversions to Storage for Vail Lake) for presentation of the information regarding Vail Lake and further asserts its belief that the Vail Dam impoundment fails to comply with the 1940 Stipulated Judgment.

Section 4, Subsurface Water Availability and Use: In the absence of CWRMA implementation, and with respect to Figure 4.1 (Water Level Elevations – Windmill Well) and to Subsections 4.3 (Water Levels) and 4.4 (Groundwater Storage), Camp Pendleton is concerned about the apparent excessive pumping in the Upper Basin, and further asserts its belief that the lengthy and significant drawdown and concomitant loss in storage adversely affect the water supply for adjacent and downstream users holding senior water rights.

Section 7, Water Production and Use: First, in the absence of CWRMA implementation, and with regard to the local production figures shown in Table 7.1 (Water Production and Use), Camp Pendleton is concerned about the high level of groundwater production from the Upper Basin, a level that Camp Pendleton believes to be substantially greater than the safe yield.

Second, in the absence of CWRMA implementation, and with regard to Footnote 4 of Table 7.1 (distinction between RCWD pumping of older alluvium water and of Vail recovery water), Camp Pendleton has serious reservations as to the accounting system that is being used as well as the legal and technical bases upon which such system has been formulated.

Third, in the absence of CWRMA implementation, and as to the RCWD part of Subsection 7.2.8 (Water Purveyors – Rancho California Water District), Camp Pendleton has serious reservations as to the accounting system that is being used as well as the legal and technical bases upon which such system has been formulated. These reservations include the following:

1. As to the "Vail Appropriation" part: *Representatives of the United States contend that under the 1940 Stipulated Judgment storage of water in Vail Lake is limited to Rancho California Water District's share of the flood waters of the Santa Margarita River system. However, to date, the parties have not agreed on a definition of "flood waters."*

2. As to the "Division of Local Water" part: *In 1995 well logs and geophysical logs of all Rancho California WD wells were reviewed by representatives of the United States and Rancho California WD to determine the depths of the younger alluvium. There was general agreement between the parties about the depth of the younger alluvium in production wells, except for ten wells shown on Table 7.7 of the 1994-95 report. The remaining disagreements relate to differences about the magnitude of the clay layer needed to define the base of the younger alluvium, the importance of neighboring well logs, and general concepts about overall geologic setting.*

Section 8, Unauthorized Water Use: In the absence of CWRMA implementation, and with respect to water use by RCWD, Camp Pendleton asserts the following:

1. Such use is in violation of the 1940 Stipulated Judgment by reason of, among other things, Vail Lake operations in excess of entitlement and pumping from both younger and older alluvium in excess of entitlement, which contentions RCWD disputes;

2. Rediversion and use of water impounded by Vail Dam are not in accord with terms of Permit 7032;

3. Unauthorized pumping is being done, including pumping from the younger alluvium outside of Pauba Valley without a permit and pumping from the older alluvium in violation of Court adjudications.

Section 9, Threats to Water Supply: In the absence of CWRMA implementation, and with respect to Subsection 9.3 (Potential Overdraft Conditions) and as noted in the foregoing comments to Sections 4 and 7, Camp Pendleton is seriously concerned regarding the apparent excessive pumping in the Upper Basin.

Report on the Financial Statements

We have audited the accompanying financial statements of Watermaster of the Santa Margarita River Watershed, which comprise the statement of financial position as of September 30, 2013, and the related statements of activities and cash flows for the fiscal year then ended, and the related notes to the financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

1011 Camino Del Rio South, Suite 410, San Diego, CA 92108 / T: 619.543.9702 / F: 619.543.0116

Opinion

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Watermaster of the Santa Margarita River Watershed as of September 30, 2013, and the changes in its net assets and its cash flows for the fiscal year then ended in accordance with accounting principles generally accepted in the United States of America.

Other Matters

Other Information

Our audit was conducted for the purpose of forming an opinion on the financial statements as a whole. The supplementary information as listed in the table of contents is presented for purposes of additional analysis and is not a required part of the financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. The information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated in all material respects in relation to the financial statements as a whole.

Other Reporting Required by *Government Auditing Standards*

In accordance with *Government Auditing Standards*, we have also issued our report dated December 17, 2013, on our consideration of Watermaster of the Santa Margarita River Watershed's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering Watermaster of the Santa Margarita River Watershed's internal control over financial reporting and compliance.

WATERMASTER OF THE SANTA MARGARITA RIVER WATERSHED
NOTES TO FINANCIAL STATEMENTS
SEPTEMBER 30, 2013

NOTE 1 - ORGANIZATION

Nature of operations

Watermaster of the Santa Margarita River Watershed (Watermaster) was created by order of the United States District Court, Southern District of California (Court). The Court, as part of its continuing jurisdiction in the case of United States vs. Fallbrook Public Utility District et al., has authority to make judicial determination of all water rights within the Santa Margarita River Watershed. Watermaster is empowered by the Court to administer and enforce the provisions of a Modified Final Judgment and Decree entered April 6, 1966, and subsequent instructions and orders of the Court. On November 15, 2005, the Court issued an Order authorizing the Steering Committee to execute an Employment Agreement with Charles W. Binder, DBA Binder & Associates Consulting, Inc., to serve as Watermaster.

A Steering Committee was appointed by the Court to assist Watermaster and the Court. The Steering Committee is comprised of representatives from the United States (Camp Pendleton Marine Corps Base), Rancho California Water District, Fallbrook Public Utility District (FPUD), Eastern Municipal Water District, Metropolitan Water District of Southern California, the Pechanga Band of Luiseño Mission Indians, and Western Municipal Water District.

The fees and expenses of Watermaster during the water year ended September 30, 2013, were, per court order, paid from equal assessments against the Steering Committee members. The Court retains the right to assess other parties in the watershed in future years. Pursuant to an agreement between Watermaster and the United States Geological Survey (USGS), the USGS provides operations and maintenance services for stream gauging stations and groundwater monitoring wells in the watershed.

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

A. Basis of accounting

The accounting policies of the Watermaster substantially conform to generally accepted accounting principles. The accounting records are maintained on an accrual basis. Revenue is recognized when earned and expenses are recorded upon incurrence of a liability. Accounts receivable represent amounts due from Steering Committee members.

B. Cash and cash equivalents

Cash and cash equivalents are from time to time variously composed of cash in banks and liquid investments with original maturities of three months or less.

C. Investments

The Watermaster presents its investments in accordance with Accounting Standards. Investments in marketable securities with readily determinable fair values and all investments in debt securities are reported at their fair values in the Statement of Net Assets. The fair values of these investments are subject to change based on the fluctuations of market values. Unrealized gains and losses are included in the change in net assets. Investment income and gains restricted by a donor or by the Watermaster are reported as increases in unrestricted net assets if the restrictions are met (either by the passage of time or by use) in the reporting period in which the income and gains are recognized.

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

D. Accounts receivable

Watermaster considers accounts receivable to be fully collectible; accordingly, no allowance for doubtful accounts is required.

E. Fixed assets

Fixed assets are recorded at cost and depreciated under the straight-line method over their estimated useful lives of 3 to 10 years. Repair and maintenance costs, which do not extend the useful lives of the asset, are charged to expense. The cost of assets, sold or retired, and related amounts of accumulated depreciation are eliminated from the accounts in the year of disposal, and any resulting gain or loss is included in the earnings. Management has elected to capitalize and depreciate all assets costing $2,000 or more; all other assets are charged to expense in the year incurred.

F. Advanced assessments

Advanced assessments represent amounts levied or collected in the current year that apply to the next fiscal year.

G. Use of estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect certain reported amounts and disclosures. Accordingly, actual results could differ from those estimates.

H. Classification of items

Certain items may have been classified different from one year to another.

I. Income taxes

Watermaster was created by order of the Court and is exempt from taxation.

J. Excess of expenses over budgets

Excess of actual expenses over budgeted amounts in individual accounts were as follows:

Human resource services	$	(590)
Insurance	$	(75)
Audit	$	(39)
Legal services	$	(1,470)
Travel	$	(311)
Depreciation expense	$	(347)

There were two major items where the actual expenses exceeded the budget amount.

- Human resource services - These services were not listed as a separate line item in the 2013 budget. These services were anticipated and were provided in accordance with the services agreement with FPUD. Human Resources Services will be shown as a separate line item for future budgets.

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

J. Excess of expenses over budgets (continued)

- Legal services - These services were not anticipated and were not listed as a separate line item in the 2013 budget. The specific services relate to retention of legal counsel to assist the Watermaster in responding to objections filed with the Court concerning the 2012 Annual Watermaster Report. Retention of legal counsel was approved by the Steering Committee with expenses to be paid from reserves.

NOTE 3 - CASH AND CASH EQUIVALENTS

Cash and cash equivalents at September 30, 2013, consisted of the following:

Cash in banks	$	2,552
Money market		303,777
Total cash and cash equivalents	$	306,329

Cash balances held in banks are insured up to $250,000 by the Federal Deposit Insurance Corporation (FDIC). At September 30, 2013, the Watermaster did not have any uninsured funds.

NOTE 4 - SHORT-TERM INVESTMENTS

Short-term investments at September 30, 2013, are stated at Fair Market Value and consist of the following:

	Cost	Fair Value	Carrying Value
Unrestricted:			
Pacific Western Bank certificate of deposit	$ 50,823	$ 50,988	$ 50,988
Union Bank certificate of deposit	150,000	150,000	150,000
Total unrestricted	$ 200,823	$ 200,988	$ 200,988

Short-term investment activity for the fiscal year ended September 30, 2013, consisted of the following:

	Unrestricted
Interest and dividends	$ 300
Net investment return	$ 300

Watermaster realized a gain or loss on the Union Bank certificate of deposit when it earned its interest. During the fiscal year, Watermaster recognized the entire interest income related to the Union Bank certificate of deposit in the amount of $300.

NOTE 5 - FIXED ASSETS

Fixed assets at September 30, 2013, consisted of the following:

Computer equipment	$	8,261
Office furniture and equipment		19,461
Less: accumulated depreciation		(24,597)
Total fixed assets, net of depreciation	$	3,125

During the fiscal year ended September 30, 2013, $347 was charged to depreciation expense.

NOTE 6 - RELATED PARTY TRANSACTIONS

The Watermaster has entered into an agreement with Fallbrook Public Utility District (FPUD), which is a member of the Watermaster Steering Committee, whereby FPUD provides office space and accounting services. Rent of office space and accounting services for the fiscal year ended September 30, 2013, were $18,000 and $6,799, respectively.

Data management and clerical support services are performed at the Watermaster office by an FPUD employee under contract. Watermaster reimburses FPUD for the actual cost of wages and fringe benefits. For the fiscal year ended September 30, 2013, these reimbursements totaled $97,680.

NOTE 7 - OPERATING LEASES

The Watermaster leases a copier and electronic storage under operating lease arrangements. Future minimum lease payments under the signed lease arrangements are as follows:

Year Ending September 30,		Lease Payments
2014	$	5,344
2015		4,639
2016		4,639
2017		2,989
2018		2,839
Total	$	20,450

The Watermaster will receive no sublease rental revenue, nor pay any contingent rentals for these leases. At September 30, 2013, Watermaster's lease expense was $4,806.

INDEPENDENT AUDITORS' REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Steering Committee
Watermaster of the Santa Margarita River Watershed
Fallbrook, California

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of Watermaster of the Santa Margarita River Watershed, which comprise the statement of financial position as of September 30, 2013, and the related statements of activities and cash flows for the fiscal year then ended, and the related notes to the financial statements, and have issued our report thereon dated December 17, 2013.

Internal Control Over Financial Reporting

In planning and performing our audit of the financial statements, we considered Watermaster of the Santa Margarita River Watershed's internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of Watermaster of the Santa Margarita River Watershed's internal control. Accordingly, we do not express an opinion on the effectiveness of Watermaster of the Santa Margarita River Watershed's internal control.

A *deficiency in internal control* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis. A *material weakness* is a deficiency, or a combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis. A *significant deficiency* is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

1011 Camino Del Rio South, Suite 410, San Diego, CA 92108 / T: 619.543.9702 / F: 619.543.0116

Compliance and Other Matters

As part of obtaining reasonable assurance about whether Watermaster of the Santa Margarita River Watershed's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit, and accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the organization's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the organization's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

To the Steering Committee
Watermaster of the Santa Margarita River Watershed
Fallbrook, California

We have audited the financial statements of Watermaster of the Santa Margarita River Watershed (Watermaster), for the year ended September 30, 2013, and have issued our report thereon dated December 17, 2013. Professional standards require that we provide you with the following information related to our audit.

Our Responsibility Under U.S. Generally Accepted Auditing Standards and Government Auditing Standards

As stated in our engagement letter, our responsibility, as described by professional standards, is to plan and perform our audit to obtain reasonable, but not absolute, assurance about whether the financial statements are free of material misstatement and are fairly presented in accordance with U.S. generally accepted accounting principles. Because an audit is designed to provide reasonable, but not absolute, assurance and because we did not perform a detailed examination of all transactions, there is a risk that material misstatements may exist and not be detected by us.

As part of our audit, we considered the internal control of Watermaster. Such considerations were solely for the purpose of determining our audit procedures and not to provide any assurance concerning such internal control.

As part of obtaining reasonable assurance about whether the financial statements are free of material misstatement, we performed tests of Watermaster's compliance with certain provisions of laws, regulations, contracts, and grants. However, the objective of our tests was not to provide an opinion on compliance with such provision.

Significant Accounting Policies

Management is responsible for the selection and use of appropriate accounting policies. In accordance with the terms of our engagement letter, we will advise management about the appropriateness of accounting policies and their application. The significant accounting policies used by Watermaster are described in Note 1 to the financial statements. New accounting policies were adopted and the applications of existing policies were changed during the year ended September 30, 2013. We noted no transactions entered into by Watermaster during the year that were both significant and unusual, and of which, under professional standards, we are required to inform you, or transactions for which there is a lack of authoritative guidance or consensus.

Accounting Estimates

Accounting estimates are an integral part of the financial statements prepared by management and are based on management's knowledge and experience about past and current events and assumptions about future events.

Audit Adjustments

For purposes of this letter, professional standards define an audit adjustment as a proposed correction of the financial statements that, in our judgment, may not have been detected except through our auditing procedures. An audit adjustment may or may not indicate matters that could have a significant effect on Watermaster's financial reporting process (that is, cause future financial statements to be materially misstated).

Disagreements With Management

For purposes of this letter, professional standards define a disagreement with management as a matter, whether or not resolved to our satisfaction, concerning a financial accounting, reporting, or auditing matter that could be significant to the financial statements or the auditors' report. We are pleased to report that no such disagreements arose during the course of our audit.

Consultations With Other Independent Accountants

In some cases, management may decide to consult with other accountants about auditing and accounting matters, similar to obtaining a "second opinion" on certain situations. If a consultation involves application of an accounting principle Watermaster's financial statements or a determination of the type of auditor's opinion that may be expressed on those statements, our professional standards require the consulting accountant to check with us to determine that the consultant has all the relevant facts. To our knowledge, there were no such consultations with other accountants.

Issues Discussed Prior to Retention of Independent Auditors

We generally discuss a variety of matters, including the application of accounting principles and auditing standards, with management each year prior to retention as Watermaster's auditors. However, these discussions occurred in the normal course of our professional relationship and our responses were not a condition to our retention.

Difficulties Encountered in Performing the Audit

We encountered no difficulties in dealing with management in performing and completing our audit.

This report is intended solely for the information and use of management and Steering Committee, and is not intended to be and should not be used by anyone other than these specified parties.
